ISO 11352:2025-09 (E)

Water quality - Estimation of measurement uncertainty based on validation and quality control data

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Symbols 4

5 Principle 5

6 Procedure 6

7 Preparative considerations for the estimation of measurement uncertainty 6
7.1 Specification of the measurement 6
7.2 Specification of the parametric form in which the measurement uncertainty is reported 7

8 Evaluation of available data for within-laboratory reproducibility and bias 7
8.1 Approach and criteria 7
8.2 Within-laboratory reproducibility 8
8.2.1 General 8
8.2.2 Quality control samples covering the whole analytical process 9
8.2.3 Using standard solutions and replicates of test samples 9
8.2.4 No stable quality control samples 10
8.3 Bias 10
8.3.1 General 10
8.3.2 Analysis of suitable reference materials 11
8.3.3 Participation in interlaboratory comparisons 12
8.3.4 Recovery experiments 13

9 Calculation of the combined standard uncertainty 15

10 Calculation of the expanded uncertainty 16

11 Initial estimation of measurement uncertainty from reproducibility standard deviation 16

12 Report 16

Annex A (informative) Division of the measurement range into two parts -- Constant absolute and constant relative uncertainties 17

Annex B (normative) Estimation of the pooled standard deviation from replicate measurements 24

Annex C (informative) Examples of the estimation of measurement uncertainty 25
