

ISO 17805:2026-07 (E)

Water quality - Sampling, capture and preservation of environmental DNA from water

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	3
5 Procedure	4
5.1 General	4
5.2 Considerations prior to fieldwork	5
5.3 Equipment preparation prior to fieldwork	5
5.4 Sampling the eDNA from water	5
5.5 Preserving the sample	6
5.5.1 General	6
5.5.2 Preserving eDNA in enclosed filters	6
5.5.3 Preserving eDNA in open filters	6
5.5.4 Preserving eDNA in housed filters	7
6 Equipment and its use	7
7 Preservative solutions	8
7.1 General	8
7.2 Examples of preservative solutions that can be made in-house	9
8 Sampling report	9
8.1 General	9
8.2 Required parameters	9
8.3 Highly recommended parameters	10
8.4 Recommended parameters	10
9 Avoiding sample contamination	11
9.1 General	11
9.2 Contamination that originates from equipment and people during sample collection and processing	11
9.3 Decontamination procedure for sampling equipment	12
9.3.1 General	12
9.3.2 Materials and equipment that are in direct contact with the water sample	12
9.3.3 Materials and equipment that are not in direct contact with the water sample	12
Annex A (informative) Filter types	13
Annex B (informative) Metadata	15
Bibliography	17
