Soil quality - Sampling - Part 1: Guidance on the design of sampling programmes

Contents		Page
Foreword		v
Introduction		vi
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Planning the sampling programme	2
4.1	General	2
4.2	Defining the objective	2
4.3	Preliminary information	3
4.4	Strategy	3
4.5	Sampling	3
4.6	Safety	3
4.7	Sampling report	4
5	Objectives of sampling	4
5.1	General	4
5.2	Specific objectives	5
5.3	Sampling of other material in connection with soil investigation	7
6	Special considerations for the sampling of soils	7
6.1	General	7
6.2	Preliminary survey	8
7	Requirements for sampling personnel	9
7.1	General	9
7.2	Experience	9
7.3	Coordination of sampling and analysis	10
8	Safety precautions	10
9	Samples and sampling points	10
9.1	General	10
9.2	Sampling patterns	10
9.3	Identifying the sampling location	12
9.4	Preparation of the sampling site	13
9.5	Barriers to sampling	13
9.6	Choice of appropriate equipment to obtain samples	14
9.7	Depth of sampling	14
9.8	Timing of investigation	15
9.9	Sample quantity	15
9.10	Single samples vs. composite samples	15
9.11	Laboratory preservation, handling and containerization, labelling and transport of soil samples	15
10	Sampling report	19
10.1	General	19
10.2	Title data	19

10.3	Site data	19
10.4	Sampling procedure	19
10.5	Transportation and storage	20
10.6	Sample, profile and site description	20
10.7	Sample and profile description	20
10.8	Site description	20
11	Quality control, quality assurance and operation and testing of laboratories	20
	Annex A (informative) Sources of additional information	21
	Annex B (informative) Determination of a sampling plan	23
	Annex C (informative) Examples of different sampling patterns used in soil sampling programmes	24
	Bibliography	33
