ISO 18073:2004-04 (E)

Water quality - Determination of tetra- to octa-chlorinated dioxins and furans - Method using isotope dilution HRGC/HRMS

Contents

Page

Foreword v

1 Scope 1

2 Normative references 1

3 Terms, definitions and abbreviated terms 2
3.1 Terms and definitions 2
3.2 Abbreviated terms 3

4 Principle 4
4.1 Spiking and extraction 4
4.2 Clean-up 4
4.3 Concentration 4
4.4 Identification 5
4.5 Quantification 6
4.6 Analytical quality 6

5 Contamination and interferences 6

6 Reagents and standards 8

7 Apparatus and materials 15
7.1 Water sample containers 15
7.2 Equipment for sample preparation 15
7.3 Extraction apparatus 15
7.4 Filtration apparatus 15
7.5 Clean-up apparatus 16
7.6 Concentration apparatus 16
7.7 Other equipment 17

8 Sample collection, preservation, storage and holding times 17

9 Quality assurance/quality control 18
9.1 General 18
9.2 Initial precision and recovery (IPR) 20
9.3 Spiking 20
9.4 Method blanks 21
9.5 Quality control check sample 21
9.6 Method precision 21

10 Calibration 22
10.1 Operating conditions 22
10.2 Mass spectrometer (MS) resolution 23
10.3 QC limits and theoretical ion abundance ratios for standards 25
10.4 Retention time 25
10.5 Isomer specificity 26
10.6 Calibration by isotope dilution 27
10.7 Calibration by internal standard 28
10.8 Combined calibration 29

11 Sample preparation 29
11.1 General 29
11.2 Determination of suspended solids 29
11.3 Preparation of aqueous samples containing 1 % or less by mass suspended solids 30

12 Extraction and concentration 31
12.1 Extraction of samples with no visible particulates 31
12.2 Soxhlet extraction of filters and/or disks 31
12.3 Back-extraction with acid and base 32
12.4 Macro-concentration 33
12.5 Micro-concentration and solvent exchange 34

13 Extract clean-up 35
13.1 General 35
13.2 Gel-permeation chromatography (GPC) 35
13.3 Silica clean-up 36
13.4 Alumina clean-up 37
13.5 Carbon column 37
13.6 Florisil clean-up 38

14 HRGC/HRMS analysis 38

15 System and laboratory performance 38
15.1 General 38
15.2 MS resolution 38
15.3 Calibration verification 39
15.4 GC resolution 39
15.5 Blank 39

16 Qualitative determination 40

17 Quantitative determination 40
17.1 Concentration calculations for isotope dilution 40
17.2 Internal standard recovery and concentration calculations 41
17.3 Concentration in the aqueous sample 42
17.4 Toxicity equivalents (TEQs) 42

18 Analysis of complex samples 44
18.1 General 44
18.2 Recovery of internal standards 44

19 Results and reporting 45

Annex A (informative) Application of HRGC/HRMS 46

Annex B (informative) Interlaboratory trial data 51

Annex C (informative) Pollution prevention and waste management 56

Annex D (informative) Additional extraction and clean up techniques 57

Bibliography 61
