ISO 16712:2005-02 (E)

Water quality - Determination of acute toxicity of marine or estuarine sediment to amphipods

Contents

Page

1 Scope 1

2 Principle 1

3 Test environment 1
3.1 Facilities 1
3.2 Lighting 1

4 Reagents and materials 1
4.1 Test organism 1
4.2 Overlying water 3

5 Apparatus 4

6 Treatment and preparation of samples 5
6.1 General 5
6.2 Control or reference sediment 5
6.3 Test sediment 5
6.4 Preparation of sediment samples 5

7 Test procedures 6
7.1 Preparing the exposure vessels 6
7.2 Introducing the organisms 6
7.3 Test conditions 7
7.4 Test observations and measurements 7
7.5 Expression of results 8
7.6 Reburrowing capability 8
7.7 Validity of the test 8

8 Analysis and interpretation of results 8
8.1 Data analysis 8
8.2 Non-contaminant factors 9

9 Reference toxicant 9

10 Precision 9

11 Test report 10

Annex A (informative) Reconstitued salt water 11

Annex B (normative) Maximum length of amphipod species, optimal salinity and temperature ranges 12

Annex C (informative) Precision data 13

Bibliography 14
