Foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Principle 7

5 Equipment and preservatives 7

6 Sample processing 9

7 Counting procedure 12

8 Quantitative validation 18

9 Measurement uncertainty 19

Annex A (informative) Optical characteristics of inverted microscopes 21

Annex B (informative) Sample treatment 23

Annex C (informative) Phytoplankton analysis strategies 27

Annex D (informative) Identification 30

Annex E (informative) Use of conventional compound microscopes 31

Annex F (informative) Statistical procedure 34

Bibliography 40

Figures Figure 1 -- Random distribution of particles (note the open spaces) 12

Figure 2 -- Example of rule for counting cells on the edge of the field. Algae objects crossing both the top and left hand side of grid are not counted whilst those crossing the bottom and right hand side of grid are counted 14

Figure F.1 -- Illustration of collecting algal data for a Run-test 35

Tables Table 1 -- Settling times for Lugol preserved seawater samples [12] 11

Table F.F1 -- Maximum allowable variance for Poisson approximation (μ = mean, = variance) 35

Table F.F2 -- Multinomial homogeneity test 36
