DIN ISO 20056-2:2019-07 (E)

Rolling bearings - Load ratings for hybrid bearings with rolling elements made of ceramic - Part 2: Static load ratings (ISO 20056-2:2017)

Contents

Page

National foreword 3

National Annex NA (informative) Bibliography 4

Foreword 5

Introduction 6

1 Scope 7

2 Normative references 7

3 Terms and definitions 7

4 Symbols 8

5 Static load rating 9
5.1 General 9
5.2 Basic static radial load rating of radial ball bearings 9
5.3 Basic static axial load rating of thrust ball bearings 10
5.4 Basic static radial load rating of radial roller bearings 11
5.5 Basic static axial load rating of thrust roller bearings 11
5.6 Discontinuities in load ratings 11
5.7 Consideration of special material properties 11

6 Static equivalent load 11
6.1 General 11
6.2 Radial ball bearings 11
6.3 Thrust ball bearings 11
6.4 Radial roller bearings 11
6.5 Thrust roller bearings 11

7 Static safety factor 12

Annex A (informative) Calculation of the Hertzian parameters for point contact 13

Annex B (informative) Guide values of the factor f0 for ball bearings 14

Annex C (informative) Discontinuities in the calculation of basic static load ratings 16

Annex D (informative) Material properties and material classification 17

Bibliography 19

Figures Figure D.1 -- Examples of typical current application areas for the different material classes and ball grades (arrows indicate potential overlap) 18

Tables Table 1 -- Guideline values of static safety factor S0 for hybrid ball bearings 12

Table 2 -- Guideline values of static safety factor S0 for hybrid roller bearings 12

Table B.1 -- Guide values of factor f0 for ball bearings 14

Table D.1 -- Correction factor for rolling elements made of ceramic with different elastic 18
