## Plain bearings - Dynamic adhesion test method for DLC coated parts under lubricated condition

---

<b>Contents</b>		<b>Page</b>
Foreword .....		iv
Introduction .....		v
1	Scope .....	1
2	Normative references .....	1
3	Terms and definitions .....	1
4	Specimens .....	2
4.1	General .....	2
4.2	Ball specimen .....	2
4.3	Disk specimen .....	2
5	Apparatus .....	2
5.1	Testing equipment .....	2
5.2	Specification of ball-on-disk equipment .....	2
5.3	Sample of disk holder .....	3
5.4	Sample of ball holder .....	3
5.5	Oil bath and equipment for controlling oil temperature .....	4
5.6	AE sensor and its holder .....	5
5.7	AE sensor amplifier .....	6
5.8	Universal counter for AE events .....	6
6	Testing procedure .....	6
6.1	Pre-treatment of specimen before test .....	6
6.2	Set up of adhesion test .....	6
6.3	Lubricant .....	6
6.4	Testing conditions for adhesion test .....	6
6.5	Measurement of AE events .....	7
6.6	Number of test repeats .....	8
7	Recommendation .....	8
7.1	Measurement of friction force .....	8
7.2	Observation of disk after the test .....	8
7.3	Observation of balls after the test .....	8
8	Test report .....	9
Annex A (informative)	Example of stages for adhesion strength tests of coatings applied to engine parts .....	10
Annex B (informative)	Example of the dynamic adhesion test result relationship between the cam/follower tester and ball-on-disk tester .....	11
Bibliography .....		13
