ISO 8838:2024-09 (E)

Plain bearings - Water-lubricated plain bearing materials

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Plain bearing materials and mating (shafts) materials 2
4.1 Bearing materials 2
4.1.1 General 2
4.1.2 Wood-based material 2
4.1.3 Carbon-based material 2
4.1.4 Rubber-based material 2
4.1.5 Thermosetting resin-based material 2
4.1.6 Fluoro resin-based material 3
4.1.7 Thermoplastic resin-based material 3
4.1.8 Ceramic-based material 3
4.1.9 Cermet-based material 3
4.2 Mating (shaft) materials 3
4.2.1 General 3
4.2.2 Copper alloy 3
4.2.3 Stainless steel 3
4.2.4 Plating 3
4.2.5 Ceramics 4
4.2.6 Cermet 4

5 Characteristics, applications, manufacturing method and compatible combinations 4

6 Water supply method 4
6.1 General 4
6.2 Forced water supply 4
6.3 Circulating water supply 4
6.4 Immersed in water 4

7 Design considerations 5
7.1 General 5
7.2 Water temperature 5
7.3 Removal of foreign matters 5
7.3.1 General 5
7.3.2 Methods of removing foreign matters 5
7.4 Operating conditions 6

Annex A (informative) Characteristics, applications, manufacturing methods and compatible combinations 7

Annex B (informative) Precautions on sources of lubricating water 13
