ISO 15242-1:2004-05 (E)

Rolling bearings - Measuring methods for vibration - Part 1: Fundamentals

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Fundamental concepts 3
4.1 Bearing vibration measurement 3
4.2 Characteristics of an axis of rotation 3
4.3 Bearing error motion 4
4.4 Bearing vibration 5

5 Measurement process 6
5.1 Basis of measurement 6
5.2 Speed of rotation 6
5.3 Orientation of bearing rotational axis 6
5.4 Bearing load 6
5.5 Transducers 6

6 Measurement and evaluation methods 7
6.1 Physical quantity measured 7
6.2 Frequency domain 7
6.3 Time domain 7
6.4 Transducer response and filter characteristics 8
6.5 Method of time-averaging 9
6.6 Testing sequence 10

7 Conditions for measurement 10
7.1 Bearing conditions for measurement 10
7.2 Conditions of the test environment 10
7.3 Conditions for the test device 11
7.4 Requirements for the operator 11

8 Calibration and reference evaluation of measuring system 11
8.1 General 11
8.2 Calibration of system components 11
8.3 System performance evaluation 12

Annex A (informative) Contact resonance considerations 13

Bibliography 14
