Rolling bearings - Measuring methods for vibration - Part 1: Fundamentals

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Fundamental concepts	3
4.1 Bearing vibration measurement	3
4.2 Characteristics of an axis of rotation	3
4.3 Bearing error motion	4
4.4 Bearing vibration	5
5 Measurement process	6
5.1 Basis of measurement	6
5.2 Speed of rotation	6
5.3 Orientation of bearing rotational axis	6
5.4 Bearing load	6
5.5 Transducers	6
6 Measurement and evaluation methods	7
6.1 Physical quantity measured	7
6.2 Frequency domain	7
6.3 Time domain	7
6.4 Transducer response and filter characteristics	8
6.5 Method of time-averaging	9
6.6 Testing sequence	10
7 Conditions for measurement	10
7.1 Bearing conditions for measurement	10
7.2 Conditions of the test environment	10
7.3 Conditions for the test device	11
7.4 Requirements for the operator	11
8 Calibration and reference evaluation of measuring system	11
8.1 General	11
8.2 Calibration of system components	11
8.3 System performance evaluation	12
Annex A (informative) Contact resonance considerations	13
Bibliography	14
