

DIN EN ISO 30013:2012-03 (E)

Rubber and plastics hoses - Methods of exposure to laboratory light sources - Determination of changes in colour, appearance and other physical properties (ISO 30013:2011)

Contents	Page
Foreword	3
1 Scope	4
2 Normative references	4
3 Terms and definitions	5
4 Principle	5
5 Test pieces	5
5.1 Types of test piece	5
5.2 Conditioning	6
5.3 Number of test pieces	7
5.4 Test piece holders	7
5.5 Radiation direction and radiation surface	7
6 Light sources and exposure cycles	10
6.1 General	10
6.2 Xenon-arc lamps	10
6.3 Fluorescent UV lamps	13
6.4 Open-flame carbon-arc lamps	15
7 Procedure	17
7.1 General	17
7.2 Mounting the test pieces	17
7.3 Exposure	17
7.4 Measurement of radiant exposure	18
7.5 Removal and inspection of test pieces	18
8 Expression of results	19
8.1 Cracking and appearance	19
8.2 Changes in colour	19
8.3 Changes in physical properties	19
9 Test report	19
Annex A (informative) Properties for assessing changes in hose materials after exposure	21
Annex B (informative) Guidance on selection of light sources	22
Annex C (informative) Recommended types of test piece for determining typical properties	23
Bibliography	24
