Foreword 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 6

4 Symbols and units 7

5 Volume flow and mass flow 12

6 Resistance to motion and required power for the steady operating condition 14
6.1 General 14
6.2 Primary resistances 15
6.2.1 General 15
6.2.2 Determination of primary resistance 15
6.2.3 Determination of the hypothetical friction coefficient 16
6.3 Secondary resistances 17
6.3.1 General 17
6.3.2 Determination of individual secondary resistances 18
6.3.3 Approximate calculation of secondary resistances 19
6.4 Gradient resistance 20
6.5 Special resistances 20
6.5.1 General 20
6.5.2 Determination of individual special resistances 20

7 Design and layout of the drive system 21
7.1 General 21
7.2 Location of the drive units, size and number of drive motors 22
7.2.1 General 22
7.2.2 Horizontal and slightly inclined installations 22
7.2.3 Uphill conveying installations 23
7.2.4 Downhill conveying installations 23
7.2.5 Installations with uphill and downhill sections 23
7.3 Starting, stopping and holding 23
7.3.1 Starting 23
7.3.2 Stopping and holding 24

8 Belt tensions and take-up forces 25
8.1 General 25
8.2 Required belt tensions 25
8.2.1 General 25
8.2.2 Minimum belt tensions required for the transmission of pulley peripheral forces 25
8.2.3 Minimum belt tensions required for the limitation of the belt sag and for correct belt guiding 27
8.3 Local belt tension variations in the top and return strands 27
8.3.1 General 27
8.3.2 Steady operating condition 28
8.3.3 Non-steady operating condition 28
8.4 Take-up forces and take-up distances 29

8.5 Local belt tensions in the upper and lower strands 31
8.5.1 General 31
8.5.2 Non-steady operating conditions 31
8.5.3 Steady operating condition 31

FH 9 Distribution of belt tensions across the belt width 31

9.1 General 31
9.2 Transition curves 32
9.2.1 General 32
9.2.2 Distribution of the belt tension for textile conveyor belts 34
9.2.3 Distribution of the belt tension for steel cord conveyor belts 34
9.3 Curves 35
9.3.1 Horizontal curves 35
9.3.2 Vertical curves 35

10 Design and layout of the conveyor belt 37
10.1 General 37
10.2 Design and layout of the tension member 37
10.3 Design and layout of cover layers 40

11 Minimum pulley diameter 41

12 Design and layout of transition curves and vertical curve radii 42
12.1 General 42
12.2 Determination of the minimum transition length 43
12.2.1 General 43
12.2.2 Conveyor belts with textile plies 43
12.2.3 Steel cord conveyor belts 43
12.3 Determination of the minimum radius of vertical curves 44
12.3.1 General 44
12.3.2 Convex curves 44
12.3.3 Concave curves 44

13 Dimensioning of belt turnovers 44

Annex A (informative) Explanatory notes 46

Annex B (informative) Explanations of relationship of this standard to international standards 53
