Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Symbols 3

5 Classification 6
5.1 General 6
5.2 Classification by construction 6
5.3 Classification by tolerances on shear stiffness 7

6 Requirements 7
6.1 General 7
6.2 Type tests and routine tests 7
6.3 Functional requirements 9
6.4 Design compressive force and design shear displacement 10
6.5 Performance requirements 10
6.5.1 General 10
6.5.2 Compressive properties 10
6.5.3 Rotation properties 11
6.5.4 Shear properties 11
6.5.5 Tensile properties 12
6.5.6 Dependencies of shear properties 12
6.5.7 Shear displacement capacity 13
6.5.8 Durability 14
6.5.9 Cyclic compressive fatigue properties 14
6.5.10 Reaction force characteristics at low-rate deformation 15
6.6 Rubber material requirements 15
6.6.1 General 15
6.6.2 Tensile properties 15
6.6.3 Properties after ageing in air 15
6.6.4 Hardness 16
6.6.5 Adhesion properties 16
6.6.6 Compression set 16
6.6.7 Ozone resistance 17
6.6.8 Other properties 17
6.7 Dimensional requirements 17
6.8 Requirements on steel used for flanges and reinforcing plates 17

7 Design rules 17
7.1 General 17
7.2 Shape factor 19
7.2.1 First shape factor 19
7.2.2 Second shape factor 19
7.3 Compressive and shear properties 20

7.3.1 Compressive stiffness 20
7.3.2 Shear stiffness and equivalent damping ratio 20
7.4 Shear strain due to horizontal displacements 20
7.5 Total local shear strain 21
7.5.1 Local shear strain due to compressive force 21
7.5.2 Local shear strain due to compressive force 21
7.5.3 Total local shear strain 21
7.6 Tensile stress on reinforcing steel plates 22
7.7 Stability 22

7.7.1 Maximum compressive stress in non-seismic condition 22
7.7.2 Rotation performance check 22
7.7.3 Buckling check 23
7.7.4 Tensile stress on elastomeric isolator 23
7.8 Force, moment and deformation affecting structures 23
7.8.1 Shear force affecting structures due to movement 23
7.8.2 Resistance to rotation 23
7.8.3 Compressive displacement due to compressive force 24
7.9 Design of fixings 24
7.9.1 External forces affecting joint members 24
7.9.2 Fixings and stresses to be checked 24
7.9.3 Allowable stress 25

8 Manufacturing tolerances 25
8.1 General 25
8.2 Measuring instruments 25
8.3 Plan dimensions of elastomeric isolator body 26
8.3.1 Measurement method (see Figure 1) 26
8.3.2 Tolerances 26
8.4 Product height 27
8.4.1 Measurement method 27
8.4.2 Tolerances 28
8.5 Flatness of products 28
8.5.1 Measurement method 28
8.5.2 Tolerances 29
8.6 Horizontal offset 29
8.6.1 Measurement method 29
8.6.2 Tolerances 29
8.7 Plan dimensions of flanges 29
8.8 Flange thickness 30
8.9 Tolerances on positions of flange bolt holes 30

9 Marking and labelling 30
9.1 Information to be provided 31
9.2 Additional requirements 31
9.3 Marking and labelling examples 31

10 Test methods 31

11 Quality assurance 32

Annex A (normative) Tensile stress in reinforcing steel plate 33

Annex B (normative) Buckling stability 35

Annex C (normative) Allowable tensile stress in elastomeric isolator 36

Annex D (informative) Dependence of ultimate properties on shape factor 37

Annex E (informative) Minimum recommended tensile properties for rubber materials 41

Annex F (informative) Compressive stiffness 42

Annex G (informative) Determination of shear properties of elastomeric isolators 46

Annex H (informative) Determination of local shear strain due to compression 51

Annex I (informative) Maximum compressive stress 54

Bibliography 55
