DIN 3764-2:2024-12 (E)

Compression seals made of elastomer for sealing or covering joints in concrete and masonry - Part 2: Rectangular profiles

Contents

Page

Foreword ... 4

1 Scope ... 5

2 Normative references ... 5

3 Terms and definitions ... 6

4 Form and dimensions ... 6

5 Material ... 7
5.1 Base polymer ... 7
5.2 Material properties ... 8

6 Testing ... 9
6.1 Test piece preparation ... 9
6.2 Tensile strength at break and elongation at break ... 9
6.3 Hardness ... 9
6.4 Behaviour after conditioning in ozone ... 9
6.5 Compression set ... 9
6.6 Change in hardness after cold storage ... 9
6.7 Testing after exposure ... 9
6.7.1 General ... 9
6.7.2 Wastewater (EF 1), groundwater (EF 2), drinking water (EF 3) ... 9
6.7.3 Sea water (EF4) ... 9
6.7.4 Ozone loads (EF 5) ... 10

7 Installation and connections ... 10

8 Designation ... 11

9 Marking ... 11

Annex A (informative) Table of exposure classes for base polymers ... 12

Annex B (informative) Application examples — Sealing joints with a compression seal with a rectangular profile ... 13

Annex C (informative) Marking example — Nameplate ... 15

Bibliography ... 16

Figures

Figure 1 — Example of the cross-section ... 7

Figure 2 — Diagram of installation, a) prior to and b) after installation ... 10

Figure 3 — Installation diagram ... 10

Figure B.1 — Internal rectangular compression seal with support ... 13

Figure B.2 — External rectangular compression seal without support ... 14
