DIN EN 252:2015-01 (E)

Field test method for determining the relative protective effectiveness of a wood preservative in ground contact

Contents

Page

Foreword 4

Introduction 5

1 Scope 6

2 Principle 6

3 Wood specimens 6
3.1 Wood species 6
3.2 Wood quality 6
3.3 Characteristics and dimension of stakes 6
3.4 Number of Stakes 7
3.5 Labelling of stakes 7

4 Sample of wood preservative 7

5 Conditioning and treatment of the stakes 7
5.1 Conditioning 7
5.2 Treating process 7
5.3 Determination of retention of wood preservative product 8
5.4 Range of preservative retention 8
5.5 Post treatment conditioning of stakes 8

6 Reference stakes 8
6.1 Reference preservative 8
6.2 Alternative reference preservative 9

7 Untreated control stakes 9

8 Condition of the test field 9

9 Installation of the stakes in the test field 10

10 Inspections 10

11 Evaluation 11
11.1 General 11
11.2 Attack by microorganisms 11
11.3 Attack by termites 11
11.4 Simultaneous attack by microorganisms and termites 12

12 Duration of the test 12

13 Conditions for the validity of the test 12

14 Test report 12

Annex A (informative) Guidance for the testing of wood or wood based products that have not been treated with a wood preservative 15

Annex B (informative) Characterization of the field test site 17

Annex C (informative) Example of pattern for setting up field stakes into the ground 18

Annex D (informative) Determination of strength characteristics in wood stakes through measuring Modulus of Elasticity 19

Annex E (informative) Example of a test report 21
