## Field test method for determining the relative protective effectiveness of a wood preservative in ground contact

---

<b>Contents</b>		<b>Page</b>
Foreword .....		4
Introduction .....		5
1	Scope .....	6
2	Principle .....	6
3	Wood specimens .....	6
3.1	Wood species .....	6
3.2	Wood quality .....	6
3.3	Characteristics and dimension of stakes .....	6
3.4	Number of Stakes .....	7
3.5	Labelling of stakes .....	7
4	Sample of wood preservative .....	7
5	Conditioning and treatment of the stakes .....	7
5.1	Conditioning .....	7
5.2	Treating process .....	7
5.3	Determination of retention of wood preservative product .....	8
5.4	Range of preservative retention .....	8
5.5	Post treatment conditioning of stakes .....	8
6	Reference stakes .....	8
6.1	Reference preservative .....	8
6.2	Alternative reference preservative .....	9
7	Untreated control stakes .....	9
8	Condition of the test field .....	9
9	Installation of the stakes in the test field .....	10
10	Inspections .....	10
11	Evaluation .....	11
11.1	General .....	11
11.2	Attack by microorganisms .....	11
11.3	Attack by termites .....	11
11.4	Simultaneous attack by microorganisms and termites .....	12
12	Duration of the test .....	12
13	Conditions for the validity of the test .....	12
14	Test report .....	12
Annex A (informative)	Guidance for the testing of wood or wood based products that have not been treated with a wood preservative .....	15

<b>Annex B (informative) Characterization of the field test site .....</b>	<b>17</b>
<b>Annex C (informative) Example of pattern for setting up field stakes into the ground .....</b>	<b>18</b>
<b>Annex D (informative) Determination of strength characteristics in wood stakes through measuring Modulus of Elasticity .....</b>	<b>19</b>
<b>Annex E (informative) Example of a test report .....</b>	<b>21</b>
<b>Bibliography .....</b>	<b>24</b>
