

ISO 23045:2008-12 (E)

Building environment design - Guidelines to assess energy efficiency of new buildings

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Fundamentals on energy efficiency	2
4.1	General	2
4.2	Project information in relation to energy efficiency	2
4.3	Introducing the energy efficiency framework	4
4.4	Renewable energy integration	5
5	Expression of efficiency indicators	6
5.1	General	6
5.2	Indicators related to the performance of the building envelope	6
5.3	Indicators related to integrated energy performance of the building including systems	6
5.4	Secondary indicators	7
6	Design process	8
6.1	General	8
6.2	Stage I -- Conceptual design	8
6.3	Stage II -- Schematic design	8
6.4	Stage III -- Detail design	9
6.5	Stage IV -- Final design	10
7	Influential parameters	10
7.1	General	10
7.2	Building environment	10
7.3	Building characteristics	10
7.4	Building use	10
7.5	Calculation tools	10
8	Uses for energy performance indicators	11
8.1	General	11
8.2	Standard assets	11
8.3	Other parameters	11
Annex A (normative)	Energy efficiency flowchart	12
Annex B (informative)	Global basic energy scheme	13
Annex C (informative)	Thermal load due to persons	14
Annex D (informative)	Thermal load due to lighting	15
Annex E (informative)	Thermal load due to equipment	16

Annex F (informative) Default net energy value for fuels	17
Bibliography	18
