DIN EN 12977-5:2012-06 (E)

Thermal solar systems and components - Custom built systems - Part 5: Performance test methods for control equipment

Contents

Page

Foreword 4

Introduction 5

1 Scope 6

2 Normative references 7

3 Terms and definitions 8

4 Symbols and abbreviations 9

5 Controller classification (including equipment classification) 9
5.1 Controller 9
5.2 Sensor 10
5.3 Actuator 10

6 Requirements 11
6.1 General requirements 11
6.2 Controllers, system clocks, timers and counters 12
6.3 Sensors 12
6.4 Indicators 15
6.5 Actuators 15
6.6 Initial operation and commissioning 16
6.7 Documentation 16

7 Testing of sensors 17
7.1 General 17
7.2 Testing of temperature sensors 17
7.3 Testing of solar irradiance sensors 21
7.4 Testing of further sensors and measuring equipment 25

8 Testing of system clocks, timers and counters 25
8.1 General 25
8.2 Test equipment 25
8.3 Installation of system clocks, timers and counters 25
8.4 Test procedure 26
8.5 Data processing and evaluation 26

9 Function testing of simple differential thermostats 27
9.1 General 27
9.2 Test equipment 27
9.3 Installation of differential thermostats and/or sensors 29
9.4 Test procedure 29

10 Function testing of multi-function controllers 31
10.1 General 31
10.2 Principle of multi-function controller testing 32
10.3 Intellectual property of the manufacturer 32
10.4 Test facility for multi-function controller testing 32
10.5 Preliminary steps when using a test facility provided with an input/output emulator 34

10.6 Test procedure 37
10.7 Data acquisition and processing 39

11 Testing of actuators and additional control equipment 40
11.1 General 40
11.2 Determination of the electric power consumption of actuators and further components .. 40
11.3 Measuring the electric power of pumps with varying power consumption 40

12 Documentation 40
12.1 General 40
12.2 General information 40
12.3 Marking 40
12.4 Information for the installer, assembly and installation 41
12.5 Information for the user, operation and maintenance 41

13 Test report 42

Annex A (informative) Testing the electrical supply voltage dependence of control equipment 43

A.1 General 43
A.2 Test equipment 43
A.3 Test procedure 43
A.4 Data processing 44

Bibliography 45

Figures Figure 1 -- Elevation of an oven-arrangement to test temperature sensor accuracy, high-temperature resistance and differential thermostat functions 18

Figure 2 -- Example of a simulation box for testing differential thermostats of solar heating systems 28

Figure 3 -- Schematic of a controller test facility including an input/output emulator 34

Figure 4 -- Flow chart of steps when using a test facility provided with an input/output emulator according to Figure 3 35

Tables Table 1 -- Classification of controllers for solar heating systems 9

Table 2 -- Common sensors for solar heating systems 10

Table 3 -- Most common actuators for solar heating systems 10

Table 4 -- Accuracy of system clocks, timers and counters 12

Table 5 -- Accuracy requirements of temperature sensors for solar heating systems 13

Table 6 -- Requirements of high-temperature resistance of temperature sensors 13

Table 7 -- Climate test conditions for solar irradiance sensors capability to resist to high irradiance 14

Table 8 -- Climate test conditions for solar irradiance sensors capability to resist to high surrounding temperatures 14

Table 9 -- Accuracy requirements for solar irradiance sensors 14

Table 10 -- Total maximum electrical power of the pump(s) 15

Table 11 -- Temperatures to be used for the accuracy test 20

Table 12 -- Minimum climate test conditions for exposure and for external shock test 23

Table 13 -- Irradiance levels to test the accuracy of solar irradiance sensors 24

Table 14 -- Examples of control algorithms and corresponding test sequences for multi-function controllers 38
