ISO 9060:2018 (E)

Solar energy — Specification and classification of instruments for measuring hemispherical solar and direct solar radiation

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Instruments to measure hemispherical solar radiation — Pyranometers

- 4.1 General physical design
- 4.2 Types
- 4.3 Classification
- 4.3.1 General
- 4.3.2 Pyranometer specifications
- 4.3.3 Classification criteria
- 4.3.4 Identification of classification

5 Instruments to measure direct solar radiation—Pyrheliometers

- 5.1 General physical design
- 5.2 Types
- 5.2.1 Absolute pyrheliometer
- 5.2.2 Compensation pyrheliometer
- 5.2.3 Pyrheliometers without self-calibration capability
- 5.3 Classification
- 5.3.1 General
- 5.3.2 Pyrheliometer specifications
- 5.3.3 Classification criteria
- 5.3.4 Identification of classification

6 Final remarks

Annex A (informative) Comments on the specifications given in Tables 1 to 2

- A.1 Response time
- A.2 Zero off-set
- A.3 Non-stability
- A.4 Nonlinearity
- A.5 Directional response (for beam radiation)
- A.6 Tilt response
- A.7 Spectral error
