ISO 52127-1:2021 (E)

Energy performance of buildings — Building management system — Part 1: Module M10-12

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols and subscripts

4.1 Symbols
4.2 Subscripts

5 Description of the methods

5.1 Output of the method
5.2 General description of the method(s)
5.3 Calculation time steps

6 BMS function 1 (management of setpoints)

6.1 Output data
6.2 Input data – source of data
6.3 Calculation procedure
6.3.1 Operating conditions calculation
6.3.2 Energy calculation

7 BMS function 2 (runtime management)

7.1 Output data
7.2 Input data
7.2.1 Source of data
7.2.2 Operating conditions
7.3 Calculation procedure
7.3.1 Operating conditions calculation
7.3.2 Energy calculation

8 BMS function 3 (sequencing of generators)

8.1 Output data
8.2 Input data
8.2.1 Source of data
8.2.2 Operating conditions
8.3 Calculation procedure
8.3.1 Operating conditions calculation
8.3.2 Energy calculation
8.3.2.1 Multiple boilers generation sub-system
8.3.2.1.1 General
8.3.2.1.2 Multiple generators without priority
8.3.2.1.3 Multiple generators with priority
8.3.2.2 Modular systems
8.3.2.2.1 General
8.3.2.2.2 Modular systems with hydraulic shutdown of stand-by modules
8.3.2.2.3 Modular systems without hydraulic shutdown of stand-by modules

9 BMS function 4 (Local energy production and renewable energies)

9.1 Output data
9.2 Input data – source of data
9.3 Calculation procedure – energy calculation

10 BMS function 5 (heat recovery/heat shifting)

10.1 Output data
10.2 Input data
10.2.1 Source of data
10.2.2 Operating conditions

11 BMS function 6 (smart grid)

11.1 Output data
11.2 Input data

12 Simplified input data correlations

13 Quality control

14 Compliance check

Annex A (informative) Short description of BMS main functions

A.1 General
A.2 BMS functions
