DIN EN 13941-2:2022-06 (E)

District heating pipes - Design and installation of thermal insulated bonded single and twin pipe systems for directly buried hot water networks - Part 2: Installation (includes Amendment A1:2021)

Contents

Page

European foreword 6

Introduction 7

1 Scope 8

2 Normative references 8

3 Terms and definitions and symbols 11
3.1 Terms and definitions 11
3.2 Symbols 11
3.3 Abbreviations 11

4 Procurement 11
4.1 Manufacturer of thermal insulated pipe elements 11
4.2 Performing assembly of casing joints and PE-welding on casings 11

5 General requirements 12

6 Required information 12
6.1 Documents from the design phase 12
6.2 Documents from the manufacturers 12
6.3 Existing construction and underground systems 13
6.3.1 General 13
6.4 Wiring design diagram 13

7 Quality control 13
7.1 General 13
7.2 Installation and approval 14

8 Site preparation 15
8.1 General 15
8.2 Liason with Authorities and other parties concerned 16
8.3 Site access 16
8.4 Equipment and material 16

9 Trenching 17
9.1 General 17
9.2 Groundwater extraction 17
9.3 Installation of pipelines crossing or parallel with other constructions and existing conduits 18
9.4 Excavations crossing or parallel to existing district heating pipelines, reducing of soil cover, etc 18

10 Transport and storage of pipe elements, pipe components and other materials 18
10.1 General 18
10.2 Transport and delivery 18
10.2.1 Loading and unloading 18
10.2.2 Checking of the delivery 19

10.3 Storage 19
10.3.1 General 19
10.3.2 Storage of pipe assemblies 19
10.3.3 Storage of fitting and valve assemblies 20
10.3.4 Storage of joint casing systems and other materials 20

11 Pipe laying 20
11.1 General 20
11.2 Installation in the trench 21
11.3 Welding and testing of welds 21
11.3.1 Welding of the steel service pipe and testing of the welds 21
11.4 Venting and Draining 30
11.5 Test for leak tightness and strength 34
11.5.1 General 34
11.5.2 Visual test with !overpressure" by air 34
11.5.3 Visual test below atmospheric pressure by air 35
11.5.4 Hydrostatic test 35
11.6 Joint Casing 39
11.6.1 General 39
11.6.2 Joints 39
11.6.3 Site prepared components 39
11.7 Surveillance system 42
11.8 Expansion cushions 43
11.9 Electrical and telecommunication cable of the systems 45
11.10 Requirements for horizontal directional drilling (HDD) 45
11.11 Requirements for critical locations 45
11.11.1 Wall penetrations 45
11.11.2 Connections to other pipe systems 46
11.11.3 Pipe laying in protection tubes 46
11.11.4 Protection against external impact for above ground installations 46
11.12 Position of pipeline 46

12 Backfilling 47
12.1 General 47
12.2 Bedding material and composition 48

13 Commissioning 49

14 Operation 49

15 Documentation 49
15.1 Information on operation and maintenance 49
15.1.1 Range of application 49
15.1.2 Documentation -- aims and uses 49
15.1.3 Technical documentation 50
15.1.4 Drawings of the technical documentation 54
15.1.5 As-built documentation 58
15.2 Documentation under the scope of the PED 58

Annex A (informative) Venting and Draining 59

A.1 General 59
A.2 Venting and draining devices 59
A.3 Draining devices for large pipeline dimensions 61
A.4 Venting of new pipe sections 62
A.4.1 Venting by house connection pipeline 62
A.4.2 Venting by venting cabinets 63

Annex B (informative) Recommendations for HDD 65

B.1 General 65
B.2 Depth under roads 65

B.3 Minimum intermediate distances 66
B.4 Casing and casing field joints 66
B.5 Drilling fluid composition 66
B.6 Drilling fluid pressures 66
B.7 Borehole dimensions and borehole stability 67
B.8 Ballasting 67
B.9 Installation of pipe bundles 68
B.10 Determination of position and route corrections 68
B.11 Registration and control of HDD 69
B.12 Drilling Tolerances 69
B.13 Verification of design and methodology for the pullback operation 70
B.14 As-Built information 70

Annex C (informative) Qualification of fitters installing joints in pre-insulated bonded pipe networks 71

C.1 Knowledge and skills 71
C.2 Background for training and testing 71
C.3 Subjects for training and testing 71
C.3.1 General 71
C.3.2 Casing of polyethylene (PE) 72
C.3.2.1 Important construction characteristics and properties 72
C.3.2.2 Technological behaviour of PE 72
C.3.2.3 Mechanical properties of PE 72
C.3.2.4 Conditions for casing elements under load 73
C.3.3 Surveillance 73
C.3.4 PUR-foam system 73
C.3.4.1 PUR-foam as a two component material 73
C.3.4.2 Insulation procedures on job site 73
C.3.5 Joint types/jointing systems 74
C.3.5.1 General 74
C.3.5.2 Shrink sleeve joint with mastic/adhesive sealing 74
C.3.5.3 Welded joints/systems 74
C.3.6 Installation of joints 75
C.3.6.1 General 75
C.3.6.2 Installation of surveillance system 75
C.3.6.2.1 General 75
C.3.6.2.2 Preparation of installation 75
C.3.6.2.3 Installation of surveillance systems and their components 76
C.3.6.2.4 Measurements after insulation 76
C.3.6.3 Sealed joints 76
C.3.6.4 Welded joints 77
C.3.6.4.1 Joint face forms and welding procedures in accordance with joint types described in C.3.4.2 77
C.3.6.4.2 Training and testing 77
C.3.6.5 Insulation of joints 77
C.3.6.5.1 Special factors of influence to job site conditions 77
C.3.6.5.2 On-site foaming work 77
C.3.6.5.3 Prefabricated joint insulation installation work 78
C.3.6.6 Documentation 78

Annex D (informative) Quality control program and documentation 79

Annex E (normative) Commissioning 92

E.1 Commissioning 92
E.1.1 General 92
E.1.2 Filling with water for initial operation 93
E.1.3 Surveillance system 93

Annex F (informative) Operation 94

Bibliography 95
