

DIN 4753-3:2025-02 (E)

Water heaters, water heating installations and storage water heaters for drinking water - Part 3: Corrosion protection on the water side by enamelling and cathodic protection - Requirements and testing

Contents	Page
Foreword	4
1 Scope	5
2 Normative references	5
3 Terms and definitions.....	5
4 Requirements	7
4.1 General	7
4.2 Tank material and design.....	7
4.3 Cathodic corrosion protection	9
4.4 Requirements and tests for cathodic corrosion protection	9
4.4.1 Design of protective anodes.....	9
4.4.2 Electrode potential of galvanic anodes	9
4.4.3 Hygienic safety	10
4.4.4 Positioning of anodes in tanks.....	10
4.4.5 Installation of metallic fittings.....	10
4.4.6 Measures to avoid disruptive accumulations of gas	10
4.4.7 Testing the functionality of galvanic anodes and impressed current anode systems	10
4.4.8 Testing of the electrode potential of the protected tank.....	10
4.4.9 Quality assurance.....	11
5 Requirements for enamelling	12
5.1 Layer thickness	12
5.2 Surface finish	12
5.2.1 General	12
5.2.2 Standard protection current requirement for tanks with a rated volume $\leq 1\,000$ l.....	12
5.2.3 Discontinuities for tanks with a rated volume $\leq 1\,000$ l.....	12
5.2.4 Burn-offs for tanks with a rated volume $\leq 1\,000$ l.....	12
5.2.5 Permitted total areas of discontinuities and burn-offs for tanks with a rated volume $> 1\,000$ l.....	12
5.3 Bond strength	12
5.4 Physical and chemical resistance.....	13
5.4.1 Thermal shock endurance.....	13
5.4.2 Resistance to hot water	13
5.4.3 Resistance to acids.....	13
5.5 Hygienic safety	13
6 Testing	13
6.1 Layer thickness	13
6.2 Surface finish	13
6.2.1 General	13
6.2.2 Standard protective current requirement for tanks with a rated volume $\leq 1\,000$ l	13
6.2.3 Total areas of discontinuities and burn-offs for tanks with a rated volume $> 1\,000$ l.....	16
6.3 Bond strength.....	16
6.4 Physical and chemical resistance.....	16
6.4.1 Resistance to thermal shock.....	16
6.4.2 Resistance to hot water	16
6.4.3 Resistance to acids.....	17
6.5 Hygienic safety	17
6.6 Durability tests for tanks.....	18
7 Monitoring as part of quality assurance	18
7.1 General	18

7.2	Layer thickness	18
7.3	Surface finish	18
7.3.1	General.....	18
7.3.2	Discontinuities, burn-offs, protective current requirement, permitted total areas of discontinuities and burn-offs	18
7.4	Bond strength	19
7.5	Physical and chemical durability and hygienic safety.....	19
8	Marking.....	19
Annex A	(normative) Testing hygienic safety.....	20
A.1	Principle of the method	20
A.2	Procedure	20
A.3	Evaluation of the test results	21
	Bibliography	23

Figures

Figure 1	— Test set-up.....	11
Figure 2	— Test set-up.....	14
Figure A.1	— Migration device.....	22

Tables

Table 1	— Weld types (schematic diagrams).....	7
Table A.1	— Migration cycles in the warm water test.....	21
