DIN EN 16798-3:2026-10 (E)

Energy performance of buildings - Ventilation for buildings - Part 3: For non-residential buildings - Performance requirements for ventilation and room-conditioning systems (Modules M5-1, M5-4)

Contents

Page

European foreword 5

Introduction 8

1 Scope 10

2 Normative references 13

3 Terms and definitions 14

4 Symbols and subscripts 16

5 Description of the method and routing 17
5.1 Output of the method 17
5.2 General description of the method 17
5.2.1 Input data for energy calculation 17
5.2.2 Source of data for energy calculation 18

6 Output data for energy calculation 19

7 Indoor environment 19
7.1 General 19
7.2 Occupied zone 20

8 Agreement of design criteria 22
8.1 General 22
8.2 Principles 22
8.3 General building characteristics 22
8.3.1 Location, outdoor conditions, neighbourhood 22
8.3.2 Design weather data 22
8.3.3 Information on the operation of the building 23
8.4 Construction data 23
8.5 Geometrical description 23
8.6 Use of the rooms 23
8.6.1 General 23
8.6.2 Human occupancy 23
8.6.3 Internal heat gains 23
8.6.4 Internal pollution and moisture sources 23
8.6.5 Given extract airflow 23
8.7 Requirements in the rooms 24
8.7.1 General 24
8.7.2 Type of control 24
8.7.3 Thermal comfort 24
8.7.4 Air quality for people 24
8.7.5 Noise level 24
8.7.6 Lighting 24
8.8 System requirements 24
8.9 Heat transmission of surfaces of ventilation systems 25
8.10 General requirements for control, adjustment and monitoring 25
8.11 General requirements for maintenance and safety of operation 25

8.12 Process from project initiation to operation 26
8.13 Supply air humidity 26
9 Classification 27
9.1 Specification of types of air 27
9.2 Classification of air 29
9.2.1 Extract air and exhaust air 29
9.2.2 Outdoor air 30
9.2.3 Supply air 31
9.2.4 Indoor air 33
9.2.5 Exhaust air 33
9.2.6 Recirculation and secondary air 33
9.3 System functions and basic system types 33
9.3.1 General 33
9.3.2 Types and configurations 34
9.3.3 Controls and operation 35
9.4 Design air flow balance 36
9.5 Specific fan power 37
9.5.1 General 37
9.5.2 Classification of specific fan power 38
9.5.3 Calculating the power demand of the fan 39
9.5.4 Specific Fan Power of an entire building 39
9.5.5 Specific Fan Power of Individual Air Handling Units 39
9.5.6 AHU related P_{SFP} values 40
9.6 Heat recovery section 41
9.6.1 General 41
9.6.2 Requirements for heat recovery 42
9.6.3 Transfer of humidity 42
9.6.4 Icing and defrosting 43
9.6.5 Transfer of pollutants 43
9.7 Filtration 43
9.7.1 General aspects 43
9.7.2 Filter maintenance 44
9.8 Leakages in ventilation systems 45
9.8.1 General 45
9.8.2 Leakages in heat recovery section 45
9.8.3 Classification of outdoor air correction factor at heat recovery systems 46
9.8.4 Leakages at Air Handling unit (AHU) casing 46
9.8.5 Filter bypass leakages 46
9.8.6 Leakages of air distribution systems 47
10 Calculation and energy rating 48
10.1 Ventilation effectiveness, contamination removal effectiveness and air diffusion 48
10.1.1 General 48
10.1.2 Calculation of ventilation air volume flow 48
10.2 Calculation of air volume flow rates 49
10.2.1 Design air volume flow design based on heating, cooling loads and dehumidification 49
10.2.2 Extract air flow rates 50
10.3 Energy rating of ventilation systems 50
10.3.1 General 50
10.3.2 Specific Fan Power of an entire building 50
10.3.3 Heat recovery efficiency 50
10.3.4 Primary energy use of ventilation 51

Annex A (normative) **Input and method selection data sheet — Template** **52**
A.1 General **52**
A.2 References **53**
A.3 Design data for energy calculation — Typical range for SFP categories **53**
A.4 Design data **54**
Annex B (informative) **Input and method selection data sheet — Default choices** **55**
B.1 General **55**
B.2 References **55**
B.3 Default design data for energy calculation **57**
B.4 Default design data **58**
Annex C (normative) **Requirements for intake and exhaust openings** **59**
C.1 Intake and exhaust openings **59**
Annex D (informative) **Recirculation and secondary air filtration quality to reduce airborne pathogens** **66**
D.1 General **66**
D.2 Recirculation and secondary air quality classes **67**
D.3 Recommended air filter classes **68**
D.4 Recommendations for system design **69**
Annex E (informative) **National Data for Design Criteria — Default choices** **70**
E.1 General **70**
E.2 Design weather data **70**
E.3 Air classification **71**
E.4 Distance between intake and exhaust for roof mounted air handling units **71**
E.5 Space recommendations for components and systems **73**
E.6 Example for classification of outdoor air **77**
Bibliography **81**
