Foreword 6

Introduction 7

1 Scope 8

2 Normative references 8

3 Terms and definitions 8

4 Symbols and units 9

5 Reliability testing of liquid heating collectors 12
5.1 General 12
5.2 Internal pressure tests for absorbers 13
5.2.1 Inorganic absorbers 13
5.2.2 Absorbers made of organic materials (plastics or elastomers) 14
5.3 High-temperature resistance test 16
5.3.1 Objective 16
5.3.2 Apparatus and procedure 16
5.3.3 Test conditions 17
5.3.4 Results 17
5.4 Exposure test 17
5.4.1 Objective 17
5.4.2 Apparatus and procedure 17
5.4.3 Test conditions 18
5.4.4 Results 18
5.5 External thermal shock test 19
5.5.1 Objective 19
5.5.2 Apparatus and procedure 19
5.5.3 Test conditions 19
5.5.4 Results 20
5.6 Internal thermal shock test 20
5.6.1 Objective 20
5.6.2 Apparatus and procedure 20
5.6.3 Test conditions 20
5.6.4 Results 21
5.7 Rain penetration test 21
5.7.1 Objective 21
5.7.2 Apparatus and procedure 21
5.7.3 Test conditions 22
5.7.4 Results 22
5.8 Freeze resistance test 22
5.8.1 Objective 22
5.8.2 Apparatus and procedure 23
5.8.3 Test conditions 23
5.8.4 Results 23
5.9 Mechanical load test 24
5.9.1 Positive pressure test of the collector 24
5.9.2 Negative pressure test of the collector 25
5.10 Impact resistance test (optional) 26
5.10.1 Objective 26

5.10.2 Apparatus and procedure 26
5.10.3 Test conditions 28
5.10.4 Results 28
5.11 Final inspection 28
5.12 Test report 28

6 Thermal performance testing of liquid heating collectors 28
6.1 Glazed solar collectors under steady state conditions (including pressure drop) 28
6.1.1 Collector mounting and location 28
6.1.2 Instrumentation 30
6.1.3 Test installation 35
6.1.4 Outdoor steady-state performance test 39
6.1.5 Steady-state efficiency test using a solar irradiance simulator 43
6.1.6 Determination of the effective thermal capacity and the time constant of a collector 46
6.1.7 Collector incidence angle modifier 48
6.1.8 Determination of the pressure drop across a collector 52
6.2 Unglazed solar collectors under steady state conditions (including pressure drop) 52
6.2.1 Collector mounting and location 52
6.2.2 Instrumentation 53
6.2.3 Test installation 55
6.2.4 Outdoor steady state efficiency test 55
6.2.5 Steady-state efficiency test using a solar irradiance simulator 60
6.2.6 Determination of the effective thermal capacity and the time constant of a collector 61
6.2.7 Incidence angle modifier (optional) 62
6.2.8 Determination of the pressure drop across a collector 64
6.3 Glazed and unglazed solar collectors under quasi-dynamic conditions 64
6.3.1 Collector mounting and location 64
6.3.2 Instrumentation 65
6.3.3 Test installation 66
6.3.4 Outdoor efficiency test 67
6.3.5 Determination of the effective thermal capacity 74
6.3.6 Collector incidence angle modifier 75

Annex A (normative) Schematics for durability and reliability tests 76

Annex B (normative) Durability and reliability test report sheets 87

B.1 Record of test sequence and summary of main results 87
B.2 Internal pressure test for inorganic absorbers 88
B.2.1 Technical details of collector 88
B.2.2 Test conditions 88
B.2.3 Test results 88
B.3 Internal pressure test for absorbers made of organic materials 89
B.3.1 Technical details of collector 89
B.3.2 Test conditions 89
B.3.3 Test results 90
B.4 High-temperature resistance test 91
B.4.1 Method used to heat collectors 91
B.4.2 Test conditions 91
B.4.3 Test results 91
B.5 Exposure test 92
B.5.1 Test conditions 92
B.5.2 Test results 92
B.5.3 Climatic conditions for all days during the test 93
B.5.4 Time periods in which irradiance and surrounding air temperature have values greater than those specified in Table 4 94
B.5.5 Inspection results 95
B.6 External thermal shock test: 96
B.6.1 Test conditions 96
B.6.2 Test results 97
B.7 Internal thermal shock test: 98
B.7.1 Test conditions 98

B.7.2 Test results 99
B.8 Rain penetration test 100
B.8.1 Test conditions 100
B.8.2 Test results 100
B.9 Freeze resistance test 101
B.9.1 Collector type 101
B.9.2 Test conditions 101
B.9.3 Test results 102
B.10 Mechanical load test 103
B.10.1 Positive pressure test of the collector cover 103
B.10.2 Negative pressure test of fixings between the cover and the collector box 103
B.10.3 Negative pressure test of collector mountings 105
B.11 Impact resistance test using steel balls 106
B.11.1 Test conditions 106
B.11.2 Test procedure 106
B.11.3 Test results 106
B.12 Impact resistance test using ice balls 107
B.12.1 Test conditions 107
B.12.2 Test procedure 107
B.12.3 Test results 107
B.13 Final inspection results 108

Annex C (normative) Stagnation temperature of liquid heating collectors 109

C.1 General 109
C.2 Determination of stagnation temperature 109

Annex D (normative) Performance test report for glazed solar collectors 111

D.1 General 111
D.2 Solar collector description 111
D.3 Test results 113

Annex E (normative) Performance test report for unglazed solar collectors 116

E.1 General 116
E.2 Solar collector description 116
E.3 Test results 118

Annex F (normative) Modelling of the coefficients c1 to c6 of the collector model of 6.3 121

Annex G (normative) Measurement of effective thermal capacity 123

G.1 Test installation 123
G.2 Indoor test procedure 123
G.2.1 General 123
G.2.2 Measurements 123
G.2.3 Calculation of the effective thermal capacity 123
G.2.4 Determination of effective thermal capacity from experimental data 124
G.3 Outdoor or solar irradiance simulator test procedure 125

Annex H (informative) Comparison of the collector model of 6.1 to the collector model of 6.3 126

Annex I (informative) Properties of water (see DIN V 4757-4:1995-11) 127

I.1 Density of water (at 1 bar) in kg/m³ 127
I.2 Specific heat capacity of water (at 1 bar) in kJ/(kg K) 127

Annex J (informative) Performance test report summary for quasi dynamic test method 128

Annex K (informative) General guidelines for the assessment of uncertainty in solar collector efficiency testing 130

K.1 Introduction 130
K.2 Measurement uncertainties in solar collector efficiency testing 130

Annex L (informative) Determination of the pressure drop across a collector 134

L.1 General 134
L.2 Test installation 134
L.3 Preconditioning of the collector 134
L.4 Test procedure 134
L.5 Measurements 135
L.6 Pressure drop caused by fittings 135
L.7 Test conditions 135
L.8 Calculation and presentation of results 135

Bibliography 136
