

DIN EN 15251:2007-08 (E)

Indoor environmental input parameters for design and assessment of energy performance of buildings addressing indoor air quality, thermal environment, lighting and acoustics

Contents		Page
Foreword		4
Introduction		5
1	Scope	6
2	Normative references	6
3	Terms and definitions	7
4	Symbols and abbreviations	11
5	Interactions with other standards	11
6	Design input criteria for dimensioning of buildings, heating, cooling, mechanical and natural ventilation systems	13
6.1	General	13
6.2	Thermal environment	14
6.3	Indoor air quality and ventilation rates	15
6.4	Humidity	16
6.5	Lighting	16
6.6	Noise	17
7	Indoor environment parameters for energy calculation	17
7.1	General	17
7.2	Thermal environment	17
7.3	Indoor air quality and ventilation	18
7.4	Humidity	19
7.5	Lighting	19
8	Evaluation of the indoor environment and long term indicators	19
8.1	General	19
8.2	Design indicators	19
8.3	Calculated indicators of indoor environment	20
8.4	Measured indicators	20
8.5	Subjective evaluations	21
9	Inspections and measurement of the indoor environment in existing buildings	22
9.1	General	22
9.2	Measurements	22
10	Classification and certification of the indoor environment	24
10.1	General	24
10.2	Detailed classification and certification	24
10.3	Recommended overall evaluation of the indoor environment and certification	24
Annex A (informative)	Recommended criteria for the thermal environment	25
A.1	Recommended categories for design of mechanical heated and cooled buildings	25

A.2	Acceptable indoor temperatures for design of buildings without mechanical cooling systems	27
A.3	Recommended indoor temperatures for energy calculations	31
Annex B (informative) Basis for the criteria for indoor air quality and ventilation rates		32
B.1	Recommended design ventilation rates in non-residential buildings	32
B.1.1	General	32
B.1.2	Method based on person and building component	32
B.1.3	Method based on ventilation rate per person or per m floor area	35
B.1.4	Recommended values of CO2 for energy calculation	36
B.2	Recommended design ventilation rates in residential buildings	36
B.3	Recommended criteria for dimensioning of humidification and de-humidification	38
B.4	Recommended ventilation during un-occupied hours	39
Annex C (informative) Example on how to define low and very low polluting buildings		40
Annex D (informative) Recommended criteria for lighting		41
Annex E (informative) Indoor system noise criteria of some spaces and buildings		42
Annex F (informative) Long term evaluation of the general thermal comfort conditions		43
Annex G (informative) Recommended criteria for acceptable deviations		46
G.1	Building Category	46
G.2	Length of deviation	46
environment		48
I.1	The design criteria used	48
I.2	Whole year computer simulations of the indoor environment and energy performance	49
I.3	Long term measurement of selected parameters for the indoor environment	49
I.4	Subjective responses from occupants	49
Bibliography		51
Annex I (informative) Examples of classification and certification of the indoor Annex H (informative) Methodologies for subjective evaluations		47
