

DIN EN 15240:2007-08 (E)

Ventilation for buildings - Energy performance of buildings - Guidelines for inspection of air-conditioning systems

Contents		Page
Foreword		3
Introduction		4
1	Scope	5
2	Normative references	5
3	Terms and definitions	5
4	Inspection procedure	6
4.1	General	6
4.2	Pre-inspection and document collection	7
4.2.1	Documents	7
4.2.2	Building and system survey	8
4.2.3	Advice in case of outdated, incomplete or missing documentation	8
4.3	Methodology	8
4.3.1	General	8
4.3.2	Inspection of the refrigeration equipment	9
4.3.3	Inspection of pumps and chilled water pipe work	9
4.3.4	Inspection of effectiveness of outdoor heat rejection	9
4.3.5	Inspection of the effectiveness of heat exchange to the refrigeration system (indoor units of split and distributed systems)	9
4.3.6	Inspection of air delivery systems in treated spaces	9
4.3.7	Inspection of air delivery systems at air handling units and the associated ductwork	10
4.3.8	Inspection of air inlets to the system	10
4.3.9	Inspection of the building system controls and control parameters	10
4.3.10	Metering	10
4.4	Reporting	11
5	Advice on alternative solutions and improvements	11
Annex A (informative) Examples for the indication of subsystems of air conditioning systems		12
A.1	General	12
A.2	Indication for subsystems	12
A.3	Examples for classification of complete air conditioning systems	13
Annex B (informative) Examples of inspection classes of air conditioning systems		14
Annex C (informative) Features affecting the frequency and duration of inspection		15
Annex D (informative) Checklist of pre-inspection information		16
Annex E (informative) Recommendations for the extent of the inspection		17
E.1	General	17
E.2	List of items for inspection in each class (C, B, A)	17
Annex F (informative) Examples of checklists indicating observations and appropriate actions or advice		24

Annex G (informative) Inspection report, example of contents	30
Annex H (informative) Energy impacts of air conditioning, justification of inspection and improvements	32
H.1 General	32
H.2 Reduce cooling needs of the building	32
H.3 Improve the system efficiency	33
Bibliography	36
