## Ventilation for buildings - Calculation methods for the determination of air flow rates in buildings including infiltration

---

<b>Contents</b>		<b>Page</b>
Foreword .....		3
Introduction .....		4
1	Scope .....	6
2	Normative references .....	6
3	Terms and definitions .....	7
4	Symbols and abbreviations .....	9
5	General approach .....	10
6	Instantaneous calculation (iterative method) .....	12
6.1	Basis of the calculation method .....	12
6.2	Mechanical air flow calculation .....	13
6.3	Passive and hybrid duct ventilation .....	17
6.4	Combustion air flows .....	23
6.5	Air flow due to windows opening .....	25
6.6	Exfiltration and infiltration using iterative method .....	27
6.7	Exfiltration and infiltration calculation using direct method .....	28
7	Applications .....	30
7.1	General .....	30
7.2	Energy .....	30
7.3	Heating load .....	35
7.4	Cooling loads .....	35
7.5	Summer comfort .....	35
7.6	Indoor air quality .....	36
Annex A (normative) Data on wind pressure coefficients .....		37
Annex B (normative) Leakages characteristics .....		43
Annex C (normative) Calculation of recirculation coefficient $C_{rec}$ .....		46
Annex D (normative) Conversion formulas .....		48
Annex E (informative) Examples of fuel flow factor for residential buildings .....		51
Bibliography .....		52
