Foreword 4

Introduction 6

1 Scope 7

2 Normative references 7

3 Terms and definitions, symbols and units 7
3.1 Terms and definitions 7
3.2 Symbols and units 9

4 Relation to other EPBD-standards 10

5 Principle of the method 12
5.1 Energy calculation 12
5.2 Thermal energy required for heat emission 12
5.3 Auxiliary energy Wem,aux 13
5.4 Recoverable system thermal losses Qem,ls,rbl and non-recoverable system thermal losses Qem,ls,nrbl 13
5.5 Heat demand for space heating, building heat requirement QH 13
5.6 System thermal losses Qem,ls 14
5.7 Calculation periods 14
5.8 Splitting or branching of the space heating system 14

6 Energy calculation for a heat emission system 14
6.1 General 14
6.2 Heat loss due to non-uniform temperature distribution 15
6.3 Heat loss due to embedded surface heating devices 16
6.4 Heat loss due to control of the indoor temperature 16
6.5 Auxiliary energy, Wem,aux 17

7 Recommended calculation methods 17
7.1 General 17
7.2 Method using efficiencies 18
7.3 Method using equivalent increase in internal temperature 18

Annex A (informative) Energy losses of the heat emission system, adapted from German regulation DIN 18599 20

A.1 Heat emission 20
A.2 Efficiencies for free heating surfaces (radiators); room heights 4 m 22
A.3 Efficiencies for component integrated heating surfaces (panel heaters) (room heights 4 m) 24
A.4 Efficiencies for electrical heating (room heights 4 m) 26
A.5 Efficiencies air heating (non-domestic ventilation systems) (room heights 4 m) 27
A.6 Efficiencies for room spaces with heights 4 m (large indoor space buildings) 28
A.7 Efficiencies for room spaces with heights > 10 m 29

Annex B (informative) Equivalent increase in internal temperature - adapted from the French regulation RT2005 31

B.1 General 31
B.2 Zones 31
B.3 Spatial variation of temperature due to stratification 31
B.4 Variation of temperature due to control 32

Annex C (informative) Auxiliary energy 34

C.1 General 34
C.2 Large indoor space buildings (h > 4 m) 35
