19 Converting between a C pointer variable and a corresponding ASN.1 component (1) 174
20 Converting between a C pointer variable and a corresponding ASN.1 component (2) 174
21 Converting between a C pointer variable and a corresponding ASN.1 component (3) 175
22 Initializing and checking a C pointer variable having no corresponding ASN.1 component 175
23 Determining a hosting endpoint and a BSP product UUID from a BSP UUID 175
24 Determining a hosting endpoint and an original BSP handle from a local BSP handle 176
25 Converting BSP UUIDs 176
26 Converting BSP handles 176
27 Processing an incoming function call by exchanging a request/response BIP message pair with a slave endpoint 176
28 Processing an incoming request BIP message via an internal BioAPI function call 177
29 Notifying a unit event to zero or more subscribers 177
30 Notifying a GUI select event to a subscriber 178
31 Notifying a GUI state event to a subscriber 180
32 Notifying a GUI progress event to a subscriber 181
33 Handling unconvertible C values 183
Annex A – Specification of the TCP/IP binding 184
A.1 General 184
A.2 Transport-level message 184
A.3 TCP/IP connection between two BIP endpoints 185
A.4 Role of endpoint 185
A.5 Closing the connection on errors 186
A.6 Transport of BIP messages 186
A.7 Usage of IRIs 186
Annex B – Specification of discovery and announcement in TCP/IP binding 187
B.1 General 187
B.2 The PnP mechanisms 187
B.3 Address and name setting in IPv4 187
B.4 The network configuration function in IPv4 188
B.5 Address and name setting in IPv6 189
B.6 The network configuration function in IPv6 189
B.7 Discovery and announcement 190
B.8 Service discovery 191
B.9 Service requests via broadcast (IPv4) 191
B.10 Service requests via multicast (IPv4 or IPv6) 191
B.11 Receiving service announcement packets 192

Page

B.12 Format of discovery and announcement messages 193
B.13 Service announcement 194
B.14 Reset and restart 194
B.15 Timing of the exchange of messages over a link channel 194
B.16 Security of the exchange of messages over a link channel 194

Annex C – Specification of the SOAP/HTTP binding 195
C.1 General provisions 195
C.2 Security considerations with SOAP/HTTP binding (tutorial) 195
C.3 Schema header 196
C.4 Global elements 196
C.5 Types 200
C.6 Parameters of request BIP messages 212
C.7 Parameters of response BIP messages 223
C.8 Parameters of notification BIP messages 231
C.9 Parameters of acknowledgement BIP messages 233
C.10 Closure of the schema 233
C.11 Example 233

Annex D – Clarification of minimal requirements for simple systems 244
D.1 A simple system with a single fixed biometric device 244
D.2 A simple system with a single database of BIRs 244

Annex E – Possible scenarios involving the use of the BioAPI interworking protocol 245
E.1 Access to a central national database for security and health administration 245
E.2 Registration of individuals at a point of entry, or a local registration centre 245
E.3 Theme-park access 245

Annex F – Formal ASN.1 modules 246

Annex G – Bibliography 270
