

# ISO/IEC TR 29181-3:2013-04 (E)

## Information technology - Future Network - Problem statement and requirements - Part 3: Switching and routing

---

| <b>Contents</b>    |   | <b>Page</b> |
|--------------------|---|-------------|
| Foreword .....     |   | v           |
| Introduction ..... |   | vi          |
| 1                  | Scope .....                               | 1           |
| 2                  | Normative references .....                | 1           |
| 3                  | Terms and definitions .....               | 1           |
| 4                  | Abbreviations .....                       | 3           |
| 5                  | Background .....                          | 4           |
| 5.1                | Main features .....                       | 4           |
| 5.2                | Rationale for a new paradigm .....        | 4           |
| 5.2.1              | Appropriateness for today's traffic ..... | 4           |
| 5.2.2              | Addressing and scalability .....          | 5           |
| 5.2.3              | Security .....                            | 5           |
| 5.2.4              | Complexity of routing hardware .....      | 5           |
| 5.3                | Migration .....                           | 6           |
| 5.4                | Structure of this document .....          | 6           |
| 6                  | Requirements .....                        | 6           |
| 6.1                | Introduction .....                        | 6           |
| 6.2                | Classes of flow .....                     | 7           |
| 6.2.1              | Minimising complexity .....               | 7           |
| 6.2.2              | Synchronous flows .....                   | 7           |
| 6.2.3              | Asynchronous flows .....                  | 9           |
| 6.3                | Addressing .....                          | 11          |
| 6.4                | Security and accountability .....         | 11          |
| 6.4.1              | Privacy, trust and traceability .....     | 11          |
| 6.4.2              | Corruption of data units .....            | 11          |
| 6.4.3              | Resilience .....                          | 12          |
| 6.4.4              | Accounting .....                          | 12          |
| 6.4.5              | Time-limited calls .....                  | 12          |
| 6.4.6              | Prioritisation of calls .....             | 13          |
| 6.5                | Net neutrality .....                      | 13          |
| 6.6                | Mobility .....                            | 13          |
| 6.7                | Scalability .....                         | 13          |
| 6.8                | Network management .....                  | 13          |
| 6.9                | Energy efficiency .....                   | 14          |
| 7                  | Gap analysis .....                        | 14          |
| 7.1                | Introduction .....                        | 14          |
| 7.2                | Service experienced by flows .....        | 14          |
| 7.2.1              | Delay and throughput .....                | 14          |
| 7.2.2              | Packet size .....                         | 15          |
| 7.3                | Addressing .....                          | 15          |
| 7.4                | Security and accountability .....         | 16          |
| 7.4.1              | Privacy, trust and traceability .....     | 16          |
| 7.4.2              | Resilience .....                          | 16          |

|                       |   |    |
|-----------------------|---|----|
| 7.4.3                 | Accounting .....  | 16 |
| 7.4.4                 | Time-limited calls .....                                | 16 |
| 7.4.5                 | Prioritisation of calls .....                           | 16 |
| 7.5                   | Net neutrality .....                                    | 16 |
| 7.6                   | Mobility .....  | 16 |
| 7.7                   | Scalability .....                                       | 17 |
| 7.8                   | Network management .....                                | 17 |
| 7.9                   | Energy efficiency .....                                 | 17 |
| 8                     | Functional architecture for switching and routing ..... | 17 |
| 8.1                   | Model of the switching and routing process .....        | 17 |
| 8.2                   | Structure of the network .....                          | 18 |
| 8.3                   | Layers .....  | 19 |
| 9                     | Requirements for data plane .....                       | 19 |
| 9.1                   | General .....   | 19 |
| 9.2                   | Asynchronous service .....                              | 20 |
| 10                    | Requirements for control plane .....                    | 21 |
| 10.1                  | Control plane protocol .....                            | 21 |
| 10.2                  | Message format .....                                    | 21 |
| 10.2.1                | Encoding .....  | 21 |
| 10.2.2                | Size .....  | 22 |
| 10.2.3                | Extensibility .....                                     | 22 |
| 10.3                  | Relationship with link partner .....                    | 22 |
| 10.4                  | Timeouts .....  | 22 |
| 10.5                  | Acknowledgements .....                                  | 22 |
| 10.6                  | Call set-up .....                                       | 23 |
| 10.6.1                | Calls .....   | 23 |
| 10.6.2                | Routes .....  | 23 |
| 10.6.3                | Identification .....                                    | 23 |
| 10.6.4                | Information in set-up messages .....                    | 23 |
| 10.6.5                | Synchronous flows .....                                 | 24 |
| 10.6.6                | Asynchronous flows .....                                | 24 |
| 10.7                  | Routing .....   | 24 |
| 10.8                  | Other messages .....                                    | 25 |
| 10.8.1                | Disconnecting calls, flows, and routes .....            | 25 |
| 10.8.2                | Rerouting .....   | 25 |
| 10.8.3                | Changing QoS parameters .....                           | 25 |
| 10.8.4                | Adding flows .....                                      | 25 |
| 10.8.5                | User data .....   | 25 |
| 11                    | Route finding .....                                     | 26 |
| 11.1                  | General requirements .....                              | 26 |
| 11.2                  | Propagation of routing information .....                | 26 |
| 11.3                  | Message format .....                                    | 26 |
| Annex A (informative) | Use cases and other background information .....        | 27 |
| A.1                   | Remote contribution to radio broadcasts .....           | 27 |
| Bibliography          | .....   | 29 |
