

ISO 15397:2014-02 (E)

Graphic technology - Communication of graphic paper properties

| Contents | | Page |
|--------------------|---|-------------|
| Foreword | | iv |
| Introduction | | v |
| 1 | Scope | 1 |
| 2 | Normative references | 1 |
| 3 | Terms and definitions | 2 |
| 4 | List of required criteria for communication of paper properties | 5 |
| 5 | ISO standards related to required criteria | 6 |
| 5.1 | Sampling and general information useful for technical communication | 6 |
| 5.2 | Brand name and paper mill | 6 |
| 5.3 | Grammage | 7 |
| 5.4 | Bulk and/or thickness | 7 |
| 5.5 | Roughness for evaluation of surface properties | 7 |
| 5.6 | Gloss | 7 |
| 5.7 | Opacity | 8 |
| 5.8 | Brightness and whiteness of unprinted paper | 8 |
| 5.9 | Colour measurement of paper white point in printing conditions (D50/2°) | 9 |
| 5.10 | Colour measurement of unprinted paper in outdoor conditions (D65/10°) | 10 |
| 5.11 | Supported colour gamut in the context of prepress design | 10 |
| 5.12 | Fluorescence in the context of prepress | 10 |
| 5.13 | Storage conditions, influence of aging and testing conditions for proofing substrates | 11 |
| 5.14 | Bending resistance (bending stiffness) for Sheet-Fed Offset printing substrates | 11 |
| Bibliography | | 12 |
