|--------------------|---|-------------|
| Foreword .....     |   | iv          |
| Introduction ..... |   | v           |
| 1                  | Scope .....   | 1           |
| 2                  | Normative references .....  | 1           |
| 3                  | Terms and Definitions .....   | 1           |
| 4                  | Authentication techniques .....                                       | 2           |
| 5                  | Physical characteristics of authentication elements .....             | 2           |
| 5.1                | Dimensions .....  | 2           |
| 5.2                | Technology combinations .....   | 2           |
| 5.3                | Card construction .....   | 3           |
| 5.4                | Cross section at accessible optical area .....                        | 3           |
| 5.4.1              | Protective layer(s) .....   | 3           |
| 5.4.2              | Storage layer .....   | 3           |
| 5.4.3              | Reflective layer .....  | 4           |
| 5.4.4              | Substrate layer .....   | 4           |
| 5.4.5              | Adhesive layer .....  | 4           |
| 5.5                | Bending stiffness .....   | 4           |
| 5.6                | Card warpage .....  | 4           |
| 5.7                | X-rays .....  | 4           |
| 5.8                | Toxicity .....  | 4           |
| 5.9                | Ultraviolet light .....   | 4           |
| 5.10               | Light transmittance .....   | 5           |
| 5.11               | Bending properties .....  | 5           |
| 5.12               | Resistance to chemicals .....   | 5           |
| 5.13               | Atmospheric requirements .....  | 5           |
| 5.14               | Durability .....  | 5           |
| 5.15               | Dimensional stability and warpage with temperature and humidity ..... | 5           |
| 5.16               | Default test environment and conditioning .....                       | 5           |
| 6                  | Optical properties and characteristics .....                          | 5           |
| 6.1                | Surface roughness/scattering .....                                    | 5           |
| 6.2                | Reflectivity of blank accessible optical area .....                   | 5           |
| 6.3                | Optical resolution .....  | 6           |
| 6.4                | Polarization .....  | 6           |
| Bibliography ..... |   | 7           |
