ISO/IEC 26557:2016-12 (E)

Software and systems engineering - Methods and tools for variability mechanisms in software and systems product line

Contents

Page

Foreword vi

Introduction vii

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Variability mechanisms for software and systems product line (SSPL) 3
4.1 Overview 3
4.2 Reference model for variability mechanisms in product line 6

5 Variability mechanism management 8
5.1 Variability mechanism planning 9
5.1.1 Purpose of variability mechanism planning 9
5.1.2 Estimate adequate resources needed for variability mechanism operationalization 9
5.1.3 Assign responsibility for variability mechanism operationalization 10
5.1.4 Defining quality assurance measures for variability mechanism operationalization 10
5.2 Variability mechanism enabling 11
5.2.1 Purpose of variability mechanism enabling 11
5.2.2 Enable variability mechanism pool 12
5.2.3 Provide guidance for variability mechanism operationalization 12
5.2.4 Enable measurement infrastructure for quantifying variability mechanism operationalization 12
5.2.5 Procure resources needed to perform variability mechanism operationalization 13
5.3 Variability mechanism tracking 13
5.3.1 Purpose of variability mechanism tracking 13
5.3.2 Review the plan versus actual of variability mechanism operationalization 14
5.3.3 Assess issues in variability mechanism operationalization 14
5.3.4 Make corrective actions for variability mechanism operationalization 15

6 Variability mechanism operationalization 15
6.1 Variability mechanism operationalization for requirements 16
6.1.1 Purpose of variability mechanism operationalization for requirements 16
6.1.2 Categorize requirements variability 16
6.1.3 Assess requirements level variability mechanism 17
6.1.4 Specify requirements level variability mechanism 17
6.1.5 Prepare bindings at requirements level 18
6.1.6 Verify requirements level variability mechanism 18
6.2 Variability mechanism operationalization for design 19
6.2.1 Purpose of variability mechanisms in domain design 19
6.2.2 Make architectural decisions on binding times 20
6.2.3 Assess variability mechanisms depending on the binding time 20
6.2.4 Define guides and rules on variability mechanisms in architectural texture 20
6.2.5 Specify architectural variability mechanisms 21
6.2.6 Prepare bindings at architecture level 21
6.2.7 Verify architectural variability mechanisms 22
6.3 Variability mechanism operationalization for realization 22
6.3.1 Purpose of variability mechanisms in domain realization 22

6.3.2 Examine architectural decisions and architectural texture on realization 23
6.3.3 Assess detailed design level variability mechanisms 24
6.3.4 Specify detailed design level variability mechanisms 24
6.3.5 Define post-detailed design guides on variability mechanisms 25
6.3.6 Verify detailed design level variability mechanisms 25
6.3.7 Assess implementation level variability mechanisms 26
6.3.8 Specify implementation level variability mechanisms 26
6.3.9 Enable implementation level configurability 26
6.3.10 Prepare bindings at realization time 27
6.3.11 Verify implementation level variability mechanisms 27
6.4 Variability mechanism operationalization at compile time 28
6.4.1 Purpose of variability mechanism operationalization at compile time 28
6.4.2 Examine architectural decisions and architectural texture on compile time 28
6.4.3 Assess compile time variability mechanisms 29
6.4.4 Specify compile time variability mechanisms 29
6.4.5 Enable compile time configurability 30
6.4.6 Prepare bindings at compile time 30
6.4.7 Verify compile time variability mechanisms 30
6.5 Variability mechanism operationalization at post-compile time 31
6.5.1 Purpose of variability mechanism operationalization at post-compile time 31
6.5.2 Examine architectural decisions and architectural texture affecting post- compile time ... 32
6.5.3 Assess post-compile time variability mechanisms 32
6.5.4 Specify link time variability mechanisms 32
6.5.5 Specify load time variability mechanisms 33
6.5.6 Specify deployment time variability mechanisms 33
6.5.7 Enable post-compile time configurability 33
6.5.8 Prepare bindings at post-compile time 34
6.5.9 Verify post-compile time variability mechanism 34
6.6 Variability mechanism operationalization at run time 35
6.6.1 Purpose of variability mechanism operationalization at run time 35
6.6.2 Examine architectural decisions and architectural texture affecting run time reconfiguration 35
6.6.3 Assess run time variability mechanism 36
6.6.4 Enable run time configurability 36
6.6.5 Prepare bindings at run time 36
6.6.6 Verify run time variability mechanism 37
6.7 Variability mechanism operationalization for test artefacts 37
6.7.1 Purpose of variability mechanism operationalization for test artefacts 37
6.7.2 Examine test strategy on variability mechanisms 38
6.7.3 Assess the decisions on variability mechanisms of requirements, architecture and realization 38
6.7.4 Specify variability mechanisms in each test level 39
6.7.5 Enable reusability in testing 39
6.7.6 Prepare bindings at test stage 39
6.7.7 Verify variability mechanism operationalization for test artefacts 40

7 Variability mechanism support 40
7.1 Relating variability mechanism to variability model 41
7.1.1 Purpose of relating variability mechanism to variability model 41
7.1.2 Relate variability mechanism to variability model 41
7.1.3 Add annotation to relationship 42
7.2 Quality assurance for variability mechanism 42
7.2.1 Purpose of quality assurance for variability mechanism 42
7.2.2 Objectively evaluate variability mechanism activities 43
7.2.3 Objectively evaluate variability mechanism work products 43
7.2.4 Communicate and resolve non-compliance issues 44
7.2.5 Establish records of variability mechanism quality assurance activities 44
7.3 Binding time decision support 44
7.3.1 Purpose of binding time decision support 44
7.3.2 Determine the value of decision variables on a decision table 45
7.3.3 Specify decisions on binding time 45

7.3.4 Verify the decision table 45
7.4 Application configuration support 46
7.4.1 Purpose of application configuration support 46
7.4.2 Support realizing configurability 46
7.4.3 Apply decision rules for configuration 47
7.4.4 Improve configurability 47

Annex A (informative) Variability mechanisms in software development activities 48

Annex B (informative) Binding time decision from variability types 49
