

ISO/IEC TR 29181-8:2017-04 (E)

Information technology - Future Network - Problem statement and requirements - Part 8: Quality of Service

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Abbreviated terms	2
5	General	2
5.1	QoS in Future Network (FN)	2
5.2	Related works on QoS	3
5.2.2	European Telecommunication Standards Institute (ETSI)	3
5.2.3	Internet Engineering Task Force (IETF)	3
5.2.4	Internet 2	3
5.2.5	Telecommunication Standardization Sector of International Telecommunications Union (ITU-T)	4
5.3	Prospect of QoS architecture in FN	4
6	Problem statement of current networks for QoS	4
6.1	QoS in current networks	4
6.1.1	IPv4/IPv6 network	4
6.1.2	Next Generation Network (NGN)	5
6.1.3	WLAN	6
6.1.4	Wireless metropolitan area network (WMAN)	7
6.1.5	Mobile access networks	7
6.2	Summary of QoS problems in current networks	8
6.2.1	General	8
6.2.2	Lack of flexible mechanism supporting new applications	9
6.2.3	Lack of aggregate RSVP mechanism for business with same QoS requirements	9
6.2.4	Lack of network self-adaptability	10
6.2.5	Lack of connection-oriented characteristics	10
6.2.6	Lack of fundamental effectiveness	10
6.2.7	Lack of standards for QoS mechanism between heterogeneous networks	10
6.2.8	Lack of consideration from user perspective	10
6.2.9	Poor controllability	10
6.2.10	Human factors	10
6.2.11	Lack of effective congestion management	10
7	Requirements of FNQoS	11
7.1	Cross-layer and global	11
7.2	Customizable user service	11
7.3	Scalability and flexibility	11
7.4	Self-adjustment	11
7.5	Focusing on mobility	11
7.6	FNQoS service composition	11
7.7	Grade and classification of services	11
7.8	Quality of Experience	12

7.9	Quality of Protection	12
7.10	Connection-mode network service	12
7.11	FNQoS control technology	12
7.12	Effective congestion control mechanisms	12
Annex A (informative) Examples of technical issues for QoS realization in FN		13
Bibliography		14
