Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Terms, definitions and abbreviated terms 1

4 Overview 3

5 RVC-CAL 3
5.1 General 3
5.2 Installing ORCC tools 3
5.2.1 Java Runtime Environment 3
5.2.2 Eclipse 4
5.2.3 ORCC plug-in for Eclipse 4
5.3 "Hello world" 5
5.3.1 Creating a new project 5
5.3.2 Creating a new package 7
5.3.3 Creating a new actor 7
5.3.4 Creating a network 8
5.3.5 Running simulation 12
5.4 Simple actor 15
5.4.1 Structure of actors 15
5.4.2 Simplest actor 15
5.4.3 Running the examples 16
5.4.4 Other simple actors 17
5.4.5 Network of simple actors 19
5.5 Non-determinism 20
5.6 Guarded actions 20
5.7 State variables 23
5.8 Scheduling 25
5.9 Priorities 28
5.10 Repeat clause 29
5.11 Control flow 31
5.11.1 General 31
5.11.2 Data types 31
5.11.3 Assignments 31
5.11.4 If statement 32
5.11.5 While statement 33
5.11.6 Foreach statement 33

6 Papify and Papify Viewer 34
6.1 General 34
6.2 Using Papify 34
6.2.1 Papify activation 35
6.2.2 Actor assessment 36
6.2.3 Action assessment 37
6.2.4 Output folder 37

6.3 Papify Viewer 37
6.3.1 Chronological visualization 37
6.3.2 Event histograms 40

7 TURNUS 41
7.1 General 41
7.2 Installing the TURNUS framework 42
7.2.1 General 42
7.2.2 Java Runtime Environment 42

7.2.3 Eclipse 42
7.2.4 TURNUS plug-in for Eclipse 42
7.3 Profiling an RVC-CAL HEVC video decoder 43
7.3.1 General 43
7.3.2 Download the design and the conformance bit-streams 43
7.3.3 Import the HEVC design project in the Eclipse IDE workspace 44
7.3.4 Static code profiling 45
7.3.5 Dynamic code programming 49
7.3.6 TURNUS ORCC dynamic interpreter profiler 50
7.3.7 Algorithmic bottleneck analysis 61
7.3.8 Impact analysis 62
7.3.9 Buffer size minimization 63
7.3.10 Partitioning 64
