

ISO/IEC TR 23002-6:2017-10 (E)

Information technology - MPEG video technologies - Part 6: Tools for reconfigurable media coding implementations

Contents		Page
Foreword		v
Introduction		vi
1	Scope	1
2	Normative references	1
3	Terms, definitions and abbreviated terms	1
4	Overview	3
5	RVC-CAL	3
5.1	General	3
5.2	Installing ORCC tools	3
5.2.1	Java Runtime Environment	3
5.2.2	Eclipse	4
5.2.3	ORCC plug-in for Eclipse	4
5.3	"Hello world"	5
5.3.1	Creating a new project	5
5.3.2	Creating a new package	7
5.3.3	Creating a new actor	7
5.3.4	Creating a network	8
5.3.5	Running simulation	12
5.4	Simple actor	15
5.4.1	Structure of actors	15
5.4.2	Simplest actor	15
5.4.3	Running the examples	16
5.4.4	Other simple actors	17
5.4.5	Network of simple actors	19
5.5	Non-determinism	20
5.6	Guarded actions	20
5.7	State variables	23
5.8	Scheduling	25
5.9	Priorities	28
5.10	Repeat clause	29
5.11	Control flow	31
5.11.1	General	31
5.11.2	Data types	31
5.11.3	Assignments	31
5.11.4	If statement	32
5.11.5	While statement	33
5.11.6	Foreach statement	33
6	Papify and Papify Viewer	34
6.1	General	34
6.2	Using Papify	34
6.2.1	Papify activation	35
6.2.2	Actor assessment	36
6.2.3	Action assessment	37
6.2.4	Output folder	37

6.3	Papify Viewer	37
6.3.1	Chronological visualization	37
6.3.2	Event histograms	40
7	TURNUS	41
7.1	General	41
7.2	Installing the TURNUS framework	42
7.2.1	General	42
7.2.2	Java Runtime Environment	42
7.2.3	Eclipse	42
7.2.4	TURNUS plug-in for Eclipse	42
7.3	Profiling an RVC-CAL HEVC video decoder	43
7.3.1	General	43
7.3.2	Download the design and the conformance bit-streams	43
7.3.3	Import the HEVC design project in the Eclipse IDE workspace	44
7.3.4	Static code profiling	45
7.3.5	Dynamic code programming	49
7.3.6	TURNUS ORCC dynamic interpreter profiler	50
7.3.7	Algorithmic bottleneck analysis	61
7.3.8	Impact analysis	62
7.3.9	Buffer size minimization	63
7.3.10	Partitioning	64
	Bibliography	66
