

ISO/IEC/IEEE 8802-15-6:2017-10 (E)

Information technology - Telecommunications and information exchange between systems - Local and metropolitan area networks - Specific requirements - Part 15-6: Wireless body area network

Contents

- 1. Overview 1
 - 1.1 Scope 1
 - 1.2 Purpose 1

- 2. Normative references..... 2

- 3. Definitions, acronyms, and abbreviations 2
 - 3.1 Definitions 2
 - 3.2 Special terms..... 7
 - 3.3 Acronyms and abbreviations 7

- 4. General framework elements..... 10
 - 4.1 General 10
 - 4.2 Network topology 10
 - 4.3 Reference model 11
 - 4.4 Time base..... 12
 - 4.5 MAC and security state diagrams 12
 - 4.6 Security paradigm..... 15

- 5. MAC frame formats 16
 - 5.1 Conventions 16
 - 5.2 General format 17
 - 5.3 Management type frames..... 27
 - 5.4 Control type frames 55
 - 5.5 Data type frames 60
 - 5.6 MAC/PHY Capability fields..... 61
 - 5.7 Information elements 65

- 6. MAC functions 77
 - 6.1 General 77
 - 6.2 Frame processing 78
 - 6.3 Access classification and division 88
 - 6.4 BAN creation/operation and node connection/disconnection 90
 - 6.5 Random access 92
 - 6.6 Improvised access and unscheduled access 98
 - 6.7 Scheduled access and scheduled-polling access 107
 - 6.8 Access continuation, termination, and timeout 110
 - 6.9 MICS band communication 116
 - 6.10 Two-hop star topology extension 121
 - 6.11 Clock synchronization and guard time provisioning 132
 - 6.12 Power management..... 140
 - 6.13 Coexistence and interference mitigation..... 142
 - 6.14 MAC/PHY capability handling/interaction and Application Specific IE usage 147
 - 6.15 MAC sublayer parameters 148

- 7. Security services 151
 - 7.1 Security association and disassociation 151
 - 7.2 PTK creation and GTK distribution..... 163
 - 7.3 Message security..... 165
 - 7.4 Optional cipher functions 172

8. Narrowband PHY specification	172
8.1 Data-rate-dependent parameters	173
8.2 PLCP preamble.....	176
8.3 PLCP header	178
8.4 PSDU	181
8.5 Constellation mapping	185
8.6 General requirements.....	187
8.7 PHY layer timing.....	188
8.8 Transmitter specifications.....	190
8.9 Receiver specifications	194
9. Ultra wideband PHY specification	196
9.1 Definition of hubs and devices	196
9.2 Modes of operation	197
9.3 Rules for use of modes and options	197
9.4 Pulse shape option	198
9.5 UWB PHY frame format	198
9.6 PSDU construction	198
9.7 PHR construction.....	201
9.8 Synchronization header	204
9.9 IR-UWB symbol structure	206
9.10 UWB modulations	209
9.11 IR-UWB PSDU timing parameters.....	215
9.12 Operating frequency bands	217
9.13 Transmit spectral mask	218
9.14 IR-UWB pulse shapes.....	219
9.15 Type II hybrid ARQ mechanism	224
9.16 FM-UWB.....	228
9.17 General UWB PHY requirements.....	231
9.18 General radio specifications	232
10. Human body communications PHY specification	235
10.1 General	235
10.2 HBC packet structure.....	235
10.3 HBC transmitter.....	236
10.4 PLCP Preamble.....	237
10.5 Start frame delimiter and rate indicator	239
10.6 PHY Header.....	242
10.7 PSDU	244
10.8 Transmitter specifications.....	247
10.9 Receiver specifications	248
10.10 General requirements.....	248
10.11 PHY layer timing.....	249
Annex A (informative) Bibliography	250
Annex B (informative) Coexistence applicability guide	251
Annex C (informative) Ultra wideband.....	252
Annex D (informative) Features of human body communication	256
