ISO 22383:2020 (E)

Security and resilience — Authenticity, integrity and trust for products and documents — Guidelines for the selection and performance evaluation of authentication solutions for material goods

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Principles

4.1 General
4.2 Security-by-design process for authentication solutions
4.3 Categorization of authentication solutions
4.3.1 General
4.3.2 Provision of knowledge
4.3.2.1 General
4.3.2.2 General audience
4.3.2.3 Restricted audience
4.3.3 Sourcing and production of authentication elements and tools
4.3.4 Inspection
4.3.4.1 General
4.3.4.2 Human senses
4.3.4.3 Authentication tool
4.3.4.4 Forensic analysis
4.3.5 Categories of authentication elements
4.3.5.1 General
4.3.5.2 Overt category
4.3.5.3 Covert category
4.3.5.4 Forensic category

5 Performance criteria specification based on risk analysis

5.1 General
5.2 Risk analysis elements
5.3 Performance criteria categories
5.4 Criteria for selection of authentication elements
5.4.1 Physical characteristics
5.4.2 Attack resistance
5.4.3 Integration process
5.4.3.1 General
5.4.3.2 Manufacturing
5.4.3.3 Compliance
5.4.3.4 Training
5.5 Attack-resistance criteria for selection of authentication tools
5.5.1 General
5.5.2 Obsolescence
5.5.3 Assessment of vulnerability and resistance of authentication tools
5.6 Criteria for selection of authentication elements and tools
5.7 Criteria for selection of authentication solutions
5.7.1 Location/environment for authentication process
5.7.2 Authentication parameters
5.7.3 Life cycle criteria

5.7.4 Security policy
5.7.5 Compliance with regulations, security practices and quality procedures
5.7.6 Operation
5.7.7 Ability to evaluate the performance of the authentication solution

6 Effectiveness assessment of authentication solutions

6.1 General
6.2 Definition of effectiveness assessment protocols
6.3 Effectiveness assessment in manufacturing of authentication elements
6.4 Effectiveness of delivery of authentication elements
6.5 Effectiveness of application of authentication elements
6.6 Data management
6.7 Effectiveness measurement in normal verification/authentication situations
6.8 Effectiveness assessment in emergency verification/authentication situations
6.9 Impact of verification results and corrective actions

Annex A (informative) Assessment grid

Annex B (informative) Control means access table
