

ISO/IEC 21823-3:2021-09 (E)

Internet of things (IoT) - Interoperability for IoT systems - Part 3: Semantic interoperability

Contents	Page
FOREWORD	4
INTRODUCTION	5
1 Scope	8
2 Normative references	8
3 Terms and definitions	8
4 Abbreviated terms	9
5 IoT semantic interoperability process	9
5.1 Overview	9
5.2 IoT semantic interoperability process requirements	10
5.3 IoT semantic interoperability models	11
5.4 IoT semantic interoperability guidelines	13
5.4.1 Guidelines on the capture of semantic meaning	13
5.4.2 Guidelines on the integration of semantic interoperability capability	14
5.4.3 Guidelines on the support of semantic interoperability engineering	15
6 IoT semantic interoperability life cycle	19
6.1 Life cycle requirements	19
6.2 Life cycle model	22
6.3 Life cycle implementation guidelines	23
6.3.1 Guidelines on ontology life cycle	23
6.3.2 Guidelines on semantic interoperability life cycle	23
6.3.3 Guidelines on IoT system life cycle	24
Annex A (informative) Guidance on how to learn IoT semantic interoperability	26
Annex B (informative) Guidance on how to develop IoT semantic interoperability	29
B.1 Developing semantic interoperability capabilities	29
B.2 Building steps	29
Annex C (informative) Guidance on how to manage IoT semantic interoperability life cycle	31
C.1 Interoperability specification life cycle that supports ontologies	31
C.2 IoT system life cycle supporting interoperability	32
Annex D (informative) Ontological specification of the IoT Reference Architecture	33
D.1 General	33
D.2 Service, network, IoT device and IoT gateway	33
D.3 IoT-User	34
D.4 Virtual entity, physical entity and IoT device	35
D.5 Domain-based Reference Model (RM)	35
Annex E (informative) Related existing ontologies	37
E.1 W3C Semantic Sensor Network ontology	37
E.2 IoT-Lite	37
E.3 Open Connectivity Foundation (OCF) ontology	37
E.4 ETSI Smart Applications REFerence ontology	41
E.5 oneM2M Base Ontology	42
E.6 Sensor Model Language (SensorML)	42
E.7 IoT-O	43
E.8 IoT ontology unification approach	43
Bibliography	45

Figure 1 – Semantic interoperability facet for IoT	5
Figure 2 – Using metadata in semantic interoperability	6
Figure 3 – Meaningfulness of the data, described with metadata.....	6
Figure 4 – Objective of semantic interoperability standard	9
Figure 5 – IoT semantic interoperability process model.....	11
Figure 6 – Semantic information usage model.....	12
Figure 7 – Example of structured knowledge representation	13
Figure 8 – Example of semantic information usage for a temperature sensor	15
Figure 9 – Example of ontology mapping	17
Figure 10 – Example of ontology alignment.....	18
Figure 11 – Example of ontology merging	18
Figure 12 – Example of ontology integration	19
Figure 13 – Example of modular design	22
Figure 14 – Example of interoperability maturity evaluation result.....	22
Figure 15 – Semantic interoperability life cycle model.....	23
Figure 16 – Example of ontology life cycle model.....	23
Figure 17 – Example of interoperability specification life cycle	24
Figure D.1 – IoT entity	33
Figure D.2 – Service, network, IoT device and IoT gateway	34
Figure D.3 – IoT-User	34
Figure D.4 – Virtual entity, physical entity, and IoT device	35
Figure D.5 – Domain-based Reference Model	36
Figure E.1 – Architecture – concepts	38
Figure E.2 – Communication layering model	38
Figure E.3 – oneloTa	39
Figure E.4 – OCF ontology	40
Figure E.5 – SAREF and its extensions	41
Figure E.6 – Overview of the SAREF ontology	42
Table 1 – IoT semantic interoperability process requirements	10
Table 2 – Llife cycle requirements.....	20
Table A.1 – Syllabus example on IoT semantic interoperability practice	26
Table A.2 – Course content for semantic interoperability practice	27
Table B.1 – Building steps for IoT semantic interoperability	30
Table C.1 – Example of interoperability specification life cycle.....	31
Table C.2 – Example of IoT system life cycle	32
