## Blockchain and distributed ledger technologies - Overview of existing DLT systems for identity management

---

<b>Contents</b>		<b>Page</b>
Foreword .....		iv
Introduction .....		v
1	Scope .....	1
2	Normative references .....	1
3	Terms and definitions .....	1
4	Abbreviated terms .....	1
5	Existing taxonomies and conceptual architectures .....	3
5.1	General .....	3
5.2	NIST Taxonomic approach for blockchain IDMS .....	3
5.2.1	General .....	3
5.2.2	Authority model .....	3
5.2.3	Custody and delegation .....	4
5.2.4	Identifier origination schemes .....	5
5.2.5	Credential architectures .....	6
5.3	Functional role of DLT in identity systems .....	7
5.4	Trust Over IP Foundation .....	7
6	Existing DLT systems for identity management .....	7
6.1	General .....	7
6.2	uPort .....	7
6.3	Decentralized Identity Foundation (DIF) .....	9
6.4	Alastria ID .....	10
6.5	European Self Sovereign Identity Framework (ESSIF) .....	13
6.6	Sovrin™ Network, Hyperledger Indy, Hyperledger Aries and Hyperledger Ursa .....	15
6.7	WEF Known Traveller Digital Identity (KTDITM) .....	20
6.8	Weldentity .....	24
6.9	Masterchain .....	25
6.9.1	General .....	25
6.9.2	Actors in the system .....	27
6.10	LACChain .....	27
6.11	Decentralised digital architecture based on blind signatures .....	29
6.11.1	General .....	29
6.11.2	Actors in the system .....	30
6.11.3	Functions in the system .....	30
6.11.4	Flow of messages in the system .....	31
7	Existing relevant standards and frameworks .....	32
Bibliography .....		37
