

DIN EN ISO/IEC 29146:2023-12 (E)

Information technology - Security techniques - A framework for access management (ISO/IEC 29146:2016 including Amendment 1:2022)

Contents	Page
European foreword	4
Foreword	5
A₁ Foreword to Amendment A₁	6
Introduction	7
1 Scope	8
2 Normative references	8
3 Terms and definitions	8
4 Abbreviated terms	11
5 Concepts	12
5.1 A model for controlling access to resources	12
5.1.1 Overview	12
5.1.2 Relationship between identity management system and access management system	13
5.1.3 Security characteristics of the access method	14
5.2 Relationships between logical and physical access control	15
5.3 Access management system functions and processes	15
5.3.1 Overview	15
5.3.2 Access control policy	16
5.3.3 Privilege management	17
5.3.4 Policy-related attribute information management	18
5.3.5 Authorization	19
5.3.6 Monitoring management	19
5.3.7 Alarm management	20
5.3.8 Federated access control	20
6 Reference architecture	21
6.1 Overview	21
6.2 Basic components of an access management system	22
6.2.1 Authentication endpoint	22
6.2.2 Policy decision point (PDP)	22
6.2.3 Policy information point (PIP)	22
6.2.4 Policy administration point (PAP)	22
6.2.5 Policy enforcement point (PEP)	23
6.3 Additional service components	23
6.3.1 General	23
6.3.2 Subject centric implementation	23
6.3.3 Enterprise centric implementation	25
7 Additional requirements and concerns	26
7.1 Access to administrative information	26
7.2 AMS models and policy issues	26
7.2.1 Access control models	26
7.2.2 Policies in access management	27
7.3 Legal and regulatory requirements	27
8 Practice	27
8.1 Processes	27

8.1.1	Authorization process	27
8.1.2	Privilege management process	28
8.2	Threats	28
8.3	Control objectives	29
8.3.1	General	29
8.3.2	Validating the access management framework	29
8.3.3	Validating the access management system	32
8.3.4	Validating the maintenance of an implemented AMS	36
Annex A (informative) Common access control models	38	
Bibliography	41
