

# ISO/IEC 13239:2002-07 (E)

## Information technology - Telecommunications and information exchange between systems - High-level data link control (HDLC) procedures

---

| <b>Contents</b>    |   | <b>Page</b> |
|--------------------|---|-------------|
| Foreword .....     |   | v           |
| Introduction ..... |   | vi          |
| <b>1</b>           | <b>Scope .....</b>  | <b>1</b>    |
| <b>2</b>           | <b>Normative references .....</b>   | <b>2</b>    |
| <b>3</b>           | <b>Definitions, acronyms and abbreviations .....</b>                      | <b>3</b>    |
| 3.1                | Definitions .....   | 3           |
| 3.2                | Acronyms and abbreviations .....  | 8           |
| <b>4</b>           | <b>HDLC frame structure .....</b>   | <b>10</b>   |
| 4.1                | Frame formats .....   | 11          |
| 4.2                | Elements of the frame .....   | 12          |
| 4.3                | Transparency .....  | 15          |
| 4.4                | Transmission considerations .....   | 17          |
| 4.5                | Inter-frame time fill .....   | 17          |
| 4.6                | Invalid frame .....   | 17          |
| 4.7                | Extensions .....  | 18          |
| 4.8                | Addressing conventions .....  | 18          |
| 4.9                | Frame format field .....  | 19          |
| <b>5</b>           | <b>HDLC elements of procedures .....</b>                                  | <b>21</b>   |
| 5.1                | Data link channel states .....  | 21          |
| 5.2                | Modes .....   | 22          |
| 5.3                | Control field formats .....   | 25          |
| 5.4                | Control field parameters .....  | 27          |
| 5.5                | Commands and responses .....  | 31          |
| 5.6                | Exception condition reporting and recovery .....                          | 53          |
| <b>6</b>           | <b>HDLC classes of procedures .....</b>                                   | <b>58</b>   |
| 6.1                | Types of data station .....   | 59          |
| 6.2                | Configurations .....  | 60          |
| 6.3                | Operational modes .....   | 60          |
| 6.4                | Addressing scheme .....   | 60          |
| 6.5                | Send and receive state variables .....                                    | 60          |
| 6.6                | Fundamental classes of procedures .....                                   | 60          |
| 6.7                | Optional functions .....  | 62          |
| 6.8                | Consistency of classes of procedures .....                                | 62          |
| 6.9                | Conformance to the HDLC classes of procedures .....                       | 62          |
| 6.10               | Method of indicating classes and optional functions .....                 | 63          |
| 6.11               | Unbalanced operation (point-to-point and multipoint) .....                | 66          |
| 6.12               | Balanced operation (point-to-point) .....                                 | 69          |
| 6.13               | Unbalanced connectionless operation (point-to-point and multipoint) ..... | 73          |
| 6.14               | Balanced connectionless operation (point-to-point) .....                  | 76          |
| 6.15               | Uses of the optional functions .....                                      | 78          |
| <b>7</b>           | <b>General purpose Exchange Identification (XID) frame .....</b>          | <b>85</b>   |
| 7.1                | General purpose XID frame information field structure .....               | 85          |
| 7.2                | General purpose XID frame information field encoding .....                | 85          |

|   |  |     |
|---|--|-----|
| 7.3   | Single-frame exchange negotiation process .....  | 91  |
| 7.4   | Frame check sequence negotiation rules .....   | 92  |
| 7.5   | Rules for negotiation use of the frame format field in non-basic frame format mode ..... | 93  |
| 8   | Resolution/negotiation of data link layer address in switched environments .....         | 93  |
| 8.1   | Operational requirements .....   | 93  |
| 8.2   | Address resolution .....   | 94  |
| Annex A (informative) Explanatory notes on the implementation of the frame checking sequence ..     |  | 95  |
| Annex B (informative) Example of the use of commands and responses .....                            |  | 97  |
| Annex C (informative) Time-out function considerations for NRM, ARM and ABM .....                   |  | 118 |
| Annex D (informative) Examples of typical HDLC procedural subsets .....                             |  | 120 |
| Annex E (informative) Illustrative examples of 16/32-bit FCS negotiation .....                      |  | 123 |
| Annex F (informative) Guidelines for communicating with LAPB X.25 DTEs .....                        |  | 125 |
| Annex G (informative) Examples of information field encoding in multi-selective reject frames ..... |  | 126 |
| Annex H (normative) Frame format types .....  |  | 127 |
