

### CONTENTS

	<i>Page</i>
1 Introduction .....	1
1.1 General .....	1
1.2 Language survey .....	1
1.3 Modes and classes .....	2
1.4 Locations and their accesses .....	3
1.5 Values and their operations .....	3
1.6 Actions .....	4
1.7 Input and output .....	4
1.8 Exception handling .....	4
1.9 Time supervision .....	5
1.10 Program structure .....	5
1.11 Concurrent execution .....	5
1.12 General semantic properties .....	6
1.13 Implementation options .....	6
2 Preliminaries .....	7
2.1 The metalanguage .....	7
2.2 Vocabulary .....	8
2.3 The use of spaces .....	9
2.4 Comments .....	9
2.5 Format effectors .....	9
2.6 Compiler directives .....	10
2.7 Names and their defining occurrences .....	10
3 Modes and classes .....	12
3.1 General .....	12
3.2 Mode definitions .....	13
3.3 Mode classification .....	16
3.4 Discrete modes .....	17
3.5 Real modes .....	20
3.6 Powerset modes .....	22
3.7 Reference modes .....	22
3.8 Procedure modes .....	23
3.9 Instance modes .....	24
3.10 Synchronization modes .....	25
3.11 Input-Output Modes .....	26
3.12 Timing modes .....	28
3.13 Composite modes .....	29
3.14 Dynamic modes .....	37
3.15 Moreta Modes .....	38
4 Locations and their accesses .....	45
4.1 Declarations .....	45
4.2 Locations .....	47
5 Values and their operations .....	54
5.1 Synonym definitions .....	54
5.2 Primitive value .....	55
5.3 Values and expressions .....	70

6	Actions.....	79
6.1	General.....	79
6.2	Assignment action.....	79
6.3	If action.....	81
6.4	Case action.....	81
6.5	Do action.....	83
6.6	Exit action.....	86
6.7	Call action.....	87
6.8	Result and return action.....	90
6.9	Goto action.....	90
6.10	Assert action.....	91
6.11	Empty action.....	91
6.12	Cause action.....	91
6.13	Start action.....	91
6.14	Stop action.....	91
6.15	Continue action.....	92
6.16	Delay action.....	92
6.17	Delay case action.....	92
6.18	Send action.....	93
6.19	Receive case action.....	94
6.20	CHILL built-in routine calls.....	97
7	Input and Output.....	102
7.1	I/O reference model.....	102
7.2	Association values.....	104
7.3	Access values.....	104
7.4	Built-in routines for input output.....	105
7.5	Text input output.....	112
8	Exception handling.....	120
8.1	General.....	120
8.2	Handlers.....	121
8.3	Handler identification.....	121
9	Time supervision.....	122
9.1	General.....	122
9.2	Timeoutable processes.....	122
9.3	Timing actions.....	122
9.4	Built-in routines for time.....	124
10	Program Structure.....	125
10.1	General.....	125
10.2	Reaches and nesting.....	127
10.3	Begin-end blocks.....	129
10.4	Procedure specifications and definitions.....	129
10.5	Process specifications and definitions.....	134
10.6	Modules.....	134
10.7	Regions.....	135
10.8	Program.....	135
10.9	Storage allocation and lifetime.....	136
10.10	Constructs for piecewise programming.....	136
10.11	Genericity.....	141

	<i>Page</i>	
11	Concurrent execution.....	144
11.1	Processes, tasks, threads and their definitions.....	144
11.2	Mutual exclusion and regions .....	145
11.3	Delaying of a thread.....	148
11.4	Re-activation of a thread.....	148
11.5	Signal definition statements .....	148
11.6	Completion of Region and Task locations .....	149
12	General semantic properties.....	149
12.1	Mode rules.....	149
12.2	Visibility and name binding .....	160
12.3	Case selection.....	167
12.4	Definition and summary of semantic categories .....	169
13	Implementation options .....	173
13.1	Implementation defined built-in routines .....	173
13.2	Implementation defined integer modes .....	173
13.3	Implementation defined floating point modes.....	173
13.4	Implementation defined process names .....	173
13.5	Implementation defined handlers .....	173
13.6	Implementation defined exception names.....	173
13.7	Other implementation defined features .....	173
	Appendix I – Character set for CHILL .....	175
	Appendix II – Special symbols .....	176
	Appendix III – Special simple name strings .....	177
III.1	Reserved simple name strings .....	177
III.2	Predefined simple name strings.....	178
III.3	Exception names .....	178
	Appendix IV – Program examples.....	179
IV.1	Operations on integers.....	179
IV.2	Same operations on fractions .....	179
IV.3	Same operations on complex numbers.....	180
IV.4	General order arithmetic.....	180
IV.5	Adding bit by bit and checking the result.....	180
IV.6	Playing with dates .....	181
IV.7	Roman numerals.....	182
IV.8	Counting letters in a character string of arbitrary length.....	183
IV.9	Prime numbers .....	184
IV.10	Implementing stacks in two different ways, transparent to the user.....	184
IV.11	Fragment for playing chess .....	185
IV.12	Building and manipulating a circularly linked list .....	188
IV.13	A region for managing competing accesses to a resource .....	189
IV.14	Queuing calls to a switchboard .....	190
IV.15	Allocating and deallocating a set of resources .....	190
IV.16	Allocating and deallocating a set of resources using buffers .....	192
IV.17	String scanner1 .....	194
IV.18	String scanner2.....	195
IV.19	Removing an item from a double linked list .....	196
IV.20	Update a record of a file.....	196
IV.21	Merge two sorted files.....	197
IV.22	Read a file with variable length records.....	198
IV.23	The use of spec modules .....	199
IV.24	Example of a context.....	199
IV.25	The use of prefixing and remote modules .....	199

	<i>Page</i>
IV.26 The use of text i/o.....	200
IV.27 A generic stack.....	201
IV.28 An abstract data type.....	202
IV.29 Example of a spec module .....	202
IV.30 Object-Orientation: Modes for Simple, Sequential Stacks.....	202
IV.31 Object-Orientation: Mode Extension: Simple, Sequential Stack with Operation "Top" .....	204
IV.32 Object-Orientation: Modes for Stacks with Access Synchronization .....	204
Appendix V – Decommitted features.....	206
V.1 Free directive.....	206
V.2 Integer modes syntax.....	206
V.3 Set modes with holes.....	206
V.4 Procedure modes syntax.....	206
V.5 String modes syntax .....	207
V.6 Array modes syntax.....	207
V.7 Level structure notation.....	207
V.8 Map reference names .....	207
V.9 Based declarations.....	207
V.10 Character string literals .....	207
V.11 Receive expressions .....	207
V.12 Addr notation .....	207
V.13 Assignment syntax .....	207
V.14 Case action syntax.....	207
V.15 Do for action syntax .....	207
V.16 Explicit loop counters .....	208
V.17 Call action syntax.....	208
V.18 RECURSEFAIL exception .....	208
V.19 Start action syntax.....	208
V.20 Explicit value receive names.....	208
V.21 Blocks .....	208
V.22 Entry statement.....	208
V.23 Register names .....	208
V.24 Recursive attribute .....	208
V.25 Quasi cause statements and quasi handlers .....	209
V.26 Syntax of quasi statements .....	209
V.27 Weakly visible names and visibility statements.....	209
V.28 Weakly visible names and visibility statements.....	209
V.29 Pervasiveness .....	209
V.30 Seizing by modulion name.....	209
V.31 Predefined simple name strings.....	209
Appendix VI – Index of production rules .....	210
