E DIN EN 9722:2022-09 (D/E)

Erscheinungsdatum: 2022-07-29

Luft- und Raumfahrt - Zentralisierte Architektur für das Zustandssystemmanagement; Englische Fassung prEN 9722:2022

Aerospace series - Architecture for integrated management of a system's health condition; English version prEN 9722:2022

Contents

Page

European foreword ... 4

Introduction ... 5

1 Scope ... 6

2 Normative references ... 6

3 Terms and definitions ... 6

4 Terminology and acronyms ... 6

5 Information on which this document is based ... 9
5.1 Overview of maintenance ... 9
5.1.1 Content of the health card ... 9
5.1.2 Health card value chain ... 9
5.1.3 Use of the health card ... 10
5.2 Overview of maintenance ... 14
5.2.1 Introduction ... 14
5.2.2 Structuring of maintenance in terms of level of impact ... 14
5.2.3 Health card and example of coordination between stakeholders ... 14
5.2.4 Health card and predictive maintenance ... 15
5.3 Overview of services engineering ... 16
5.3.1 Link between system engineering and services engineering ... 16
5.3.2 Enterprise architecture applied to the support architecture ... 16
5.3.3 Enterprise architecture modelling ... 17
5.3.4 Presentation of contact/visibility/control lines ... 18
5.3.5 Link between product and services ... 19
5.3.6 Fundamental constraints and requirements ... 22

6 Recommendations on architectures (ecosystem and product) ... 23
6.1 Introduction ... 23
6.2 Functional architecture centred on the health card ... 23
6.3 Example of support organization ... 25
6.3.1 Introduction ... 25
6.3.2 Stakeholders and roles ... 25
6.3.3 Breakdown of support into areas and roles ... 25
6.4 Evolution of the organic value enhancement architecture ... 35

7 Using the health card ... 36
7.1 OODA Loop applied to the health condition of a system ... 36
7.1.1 Observe ... 36
7.1.2 Capitalize ... 38
7.1.3 Detect ... 38
7.1.4 Diagnose ... 38
7.1.5 Predict ... 39
7.1.6 Decide ... 39
7.1.7 Act/react ... 39
7.1.8 Visualize ... 40
7.2 Capacity projection/Reliability of projections ... 40
7.2.1 Introduction ... 40

7.2.2 Operational configuration of a system **40**
7.2.3 Framework of design studies for operational applications for predictive maintenance (AOMP) **41**
8 Recommendations regarding data **42**
8.1 Introduction **42**
8.2 Cybersecurity **42**
8.3 Data centralization and digital continuity **43**
8.4 Obligations of manufacturers with regard to data **48**
9 Conclusion/outlook **48**
Annex A (informative) **Enterprise architecture view of an organization example outside the Supply Chain** **50**
Annex B (informative) **Added value and responsibilities of support stakeholders** **51**
Annex C (informative) **Illustration of the product and services engineering approach** **52**
Annex D (normative) **Overview of the OODA loop: application to a diagnostic and prognostic system** **53**
Annex E (informative) **Decontextualisation: an example of degradation and reliability models** **55**
E.1 Introduction **55**
E.2 Fundamental hypotheses **55**
E.3 Framework for a solution to assess the level of degradation and reliability **55**
E.4 Decontextualisation **57**
E.5 The uses of these models **58**
E.6 Processes in which these models will be used **58**
E.7 Value enhancement architecture **58**
E.7.1 For lessons learned **58**
E.7.2 For design of the maintenance plans **59**
E.7.3 For design of aircraft **59**
E.7.4 For predictive maintenance **59**
Annex F (informative) **Use case/operational scenarios based on the phases** **60**
F.1 For maintenance, preparation of missions **60**
F.2 For the pilot, on a mission **60**
F.3 For the manufacturer, the designers **61**
Bibliography **64**
