ISO 12384:2010-11 (E)

Aerospace - Requirements for digital equipment for measurements of aircraft electrical power characteristics

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Symbols 1

5 Measurement requirements for the aircraft electric power characteristics 3
5.1 General rules, measurement states and the admissible errors of the measurement results 3
5.1.1 General 3
5.1.2 Measurement states 3
5.1.3 Admissible errors of the measurement results 3
5.2 Measurement of constant frequency (CF) a.c. power system characteristics 4
5.2.1 Steady state characteristics 4
5.2.2 Transient characteristics 8
5.3 Measurement of variable frequency (VF) a.c. power system characteristics 8
5.4 Measurement of d.c. power system characteristics (28 V or 42 V system) 8
5.4.1 Steady state characteristics 8
5.4.2 Transient d.c. voltage 10
5.5 Measurement of current parameter 10
5.6 Measurement of power transfer characteristics 10
5.7 Measurement of voltage spike characteristics 10
5.8 Measurement of power factor 10

6 General requirements for the measuring equipment 11
6.1 Applicability 11
6.1.1 Efficiency 11
6.1.2 Operating environment 11
6.2 Performance and functions 11
6.2.1 Accuracy 11
6.2.2 Scope of the measuring equipment 11
6.2.3 Measurement resolution 11
6.2.4 Input impedance 11
6.2.5 Sampling frequency range 12
6.3 Electromagnetic compatibility 12
6.4 Human-machine interface project 12
6.5 The regulation of select measuring equipment 12
6.5.1 The measurement regulation of the data process software 12
6.5.2 Selecting requirement 12
