ISO/TR 16158:2013-12 (E)

Space systems - Avoiding collisions with orbiting objects

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Collisionavoidanceworkflow 2

5 Perceiving close approaches 3
5.1 Orbit data 3
5.2 Initial filtering 4
5.3 Eliminating infeasible conjunctions 4

6 Determining potential collisions for warning and further action (close approach screening) 5
6.1 Symmetric keepout 5
6.2 Bounding volume keepout 5
6.3 Probability techniques 6
6.4 Maximum probability 7
6.5 Bounding volume based on probability 8
6.6 Comparison of techniques 9

7 Probability of survival 9
7.1 Trending 10
7.2 Cumulative probability 10
7.3 Bayesian assessment 11

8 Additional information for judging courses of action 12
8.1 Maneuver capability 12
8.2 Spacecraft characteristics 12
8.3 Quality of underlying orbit data 12

9 Consequence assessment 12
9.1 Guidance for population risk 12
9.2 Traffic impacts 13

10 Requirements for warning and information for avoidance 13
10.1 Orbit data 13
10.2 Minimum data required for warning of and avoiding collisions 13
10.3 Optional elements of information 14

11 Conjunctionandcollisionassessmentworkflowandoperationalconcept 15
