DIN EN 16603-70-32:2014-12 (E)

Space engineering - Test and operations procedure language; English version EN 16603-70-32:2014

Contents

Page

Foreword **5**

Introduction **6**

1 Scope **7**

2 Normative references **8**

3 Terms, definitions and abbreviated terms **9**

3.1 Terms from other standards 9

3.2 Terms specific to the present standard 9

3.3 Abbreviated terms 11

4 Context of the procedure language **12**

4.1 Introduction 12

4.1.1 The space system 12

4.1.2 Satellite testing 13

4.1.3 Mission operations 14

4.2 EGSE and mission control system (EMCS) 14

4.2.1 General 14

4.2.2 Space system model 14

5 Requirements to be satisfied by procedures **18**

5.1 Procedure structure 18

5.2 Language constructs 19

5.3 Language specification 22

Annex A (informative) The PLUTO language **23**

A.1 The structure of a procedure 23

A.1.1 Procedure definition 23

A.1.2 Procedure declaration body 24

A.1.3 Procedure preconditions body 24

A.1.4 Procedure main body 25

A.1.5 Procedure watchdog body 25

A.1.6 Procedure confirmation body 26

A.1.7 Structure of a step 26
A.2 The behaviour of a procedure 28
A.2.1 Procedure execution flow 28
A.2.2 Step execution flow 31
A.2.3 Activity execution flow 33
A.2.4 Execution in parallel 34
A.2.5 Continuation following an “initiate and confirm” statement 35
A.3 PLUTO language definition 37
A.3.1 Conventions 37
A.3.2 Language case sensitivity 38
A.3.3 Comments 38
A.3.4 Keywords 38
A.3.5 Identifiers 39
A.3.6 Constants 40
A.3.7 Types 43
A.3.8 System interfaces 44
A.3.9 Language constructs 45
A.4 Extended Backus-Naur form (EBNF) representation of PLUTO language constructs 103
A.4.1 Conventions 103
A.4.2 PLUTO language constructs 105
A.5 Index of PLUTO language constructs 117

Annex B (informative) Engineering units 120

B.1 Introduction 120
B.2 Engineering units and symbols 120
B.3 Engineering units railroad diagrams 126
B.4 EBNF representation of the engineering units 129

Annex C (informative) Functions 131

C.1 Introduction 131
C.2 Mathematical functions 131
C.3 Time functions 134
C.4 String functions 135

Bibliography 137

Figures

Figure 4-1: Example of space system elements 13

Figure 4-2: Example of a space system model 16

Figure A-1 : Example of a procedure and its elements 24
Figure A-2 : Execution states and transitions for a procedure 31
Figure A-3 : Execution states and transitions for a step 33
Figure A-4 : Execution states and transitions for an activity 34
Figure A-5 : Confirmation status and continuation action combinations for main body "initiate and confirm" statements 36
Figure A-6 : Confirmation status and continuation action combinations for watchdog "initiate and confirm" statements 36
Figure A-7 : Example railroad diagram 38

Tables

Table A-1 : Predefined types 43
Table A-2 : Activity and step operation requests 78
Table A-3 : Reporting data, variable and argument operation requests 78
Table A-4 : Predefined operators 97
Table A-5 : Activity and step property requests 101
Table A-6 : Reporting data, variable and argument property requests 102
Table A-7 : Event property requests 102
Table A-8 : EBNF symbols and meanings 104
Table B-1 : Simple engineering units 121
Table B-2 : Acceptable multiple and submultiple of engineering unit 123
Table B-3 : Acceptable multiples of binary engineering units 124
Table B-4 : Standard compound engineering units 124
Table C-1 : Mathematical functions 131
Table C-2 : Time functions 134
Table C-3 : String functions 135
