

ISO 18257:2016-11 (E)

Space systems - Semiconductor integrated circuits for space applications - Design requirements

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Abbreviated terms	2
5	General requirements	2
6	Design process	3
6.1	Overview	3
6.2	Design input	5
6.3	Design phases and tasks	6
6.3.1	Architecture design	6
6.3.2	Logic design and circuit design	7
6.3.3	Layout design	8
6.4	Mask making, package and testing	10
7	Detailed requirements	10
7.1	Architectural design requirements	10
7.2	Logic design and circuit design requirements	10
7.3	Layout design requirements	11
7.4	Package design requirements	11
7.4.1	Package structure design requirements	11
7.4.2	Packaging technology design requirements	12
7.4.3	Packaging electrical simulation analysis requirements	12
7.4.4	Packaging thermal simulation analysis	12
7.5	Reliability design requirements	12
7.5.1	Overview	12
7.5.2	Reliability design requirements	13
7.5.3	Antistatic design requirements	13
7.5.4	Low-power design requirements	13
7.5.5	Parameter modification and design margin optimization requirements	14
7.5.6	Electromagnetic compatibility design requirements	14
7.5.7	Radiation-hardened design requirements	14
7.6	Testability design requirements	15
Annex A (normative) Datasheet		16
Annex B (informative) Guidance		17
Bibliography		24
