ISO 18387:2019 (E)

Aerospace — Linear hydraulic utility actuator — General specifications

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 General requirements

4.1 Order of precedence
4.2 Hydraulic system characteristics
4.3 Qualification
4.4 Airworthiness requirements

5 Functional requirements

5.1 General
5.2 Actuator type
5.3 Features incorporated within the utility actuator
5.4 Hydraulic fluid
5.5 Performance
5.5.1 General
5.5.2 Performance cases
5.5.2.1 General
5.5.2.2 Normal retraction and extension
5.5.2.3 Maximum retraction and extension
5.5.2.4 Alternate retraction or extension
5.5.3 Leakage
5.5.4 Seal and scraper friction
5.5.5 End of travel snubbing
5.5.5.1 General
5.5.5.2 End of travel snubbing pressures
5.5.6 Utility actuator locking means
5.5.6.1 General
5.5.6.2 Locking loads and unlocking pressures
5.5.6.3 Lock indications
5.5.6.3.1 General
5.5.6.3.2 Visual lock indication
5.5.6.3.3 Electrical lock indication
5.6 Endurance
5.6.1 General
5.6.2 Duty cycle
5.6.3 Endurance test
5.7 Fluid and ambient temperature
5.8 Fluid cleanliness
5.8.1 Operation
5.8.2 Malfunction
5.8.3 Equipment delivery
5.9 Environmental requirements

6 Detail design requirements

6.1 General
6.2 Prevention of incorrect assembly
6.3 Standard parts

6.4 Maintainability features
6.5 Seals and scrapers
6.5.1 General
6.5.2 Gland surface finishes
6.5.3 Static seals
6.5.4 Dynamic seals
6.5.5 Scraper rings
6.5.6 Back-up rings
6.5.7 Lead in chamfers
6.6 Fluid porting through interfacing surfaces
6.7 Lubrication of hydraulic elements
6.8 Orifices
6.9 Retainer (snap) rings
6.10 Spring rings
6.11 Secondary locking
6.12 Drainage
6.13 Drillings
6.14 Fillet radii
6.15 Rod ends
6.16 Bearings
6.16.1 General
6.16.2 Lubrication
6.16.3 Anti-roll feature
6.17 Threaded components
6.18 Electro-conductive bonding
6.19 Marking
6.19.1 Nameplate
6.19.2 Fluid identification

7 Strength requirements

7.1 Hydraulic
7.1.1 DOP definition
7.1.2 Proof pressure
7.1.3 Ultimate (burst) pressure
7.1.4 Impulse fatigue
7.1.5 Operation at full flow relief pressure
7.2 Loads
7.2.1 Buckling load
7.2.2 Locking load (if applicable)
7.2.3 Limit load
7.2.4 Limit retraction and extension
7.2.5 Ultimate load
7.2.6 Bottoming loads
7.2.7 Stall load
7.2.8 Bench handling loads
7.3 Combined hydraulic pressure and structural loading
7.3.1 General
7.3.2 Design operating pressure and limit structural load
7.3.3 Proof pressure and ultimate structural load
7.4 Mechanical fatigue
7.5 Port strength
7.6 Vibration

8 Construction

8.1 Materials
8.1.1 General
8.1.2 Metals
8.1.2.1 General
8.1.2.2 Zinc and tin plating
8.2 Corrosion protection
8.2.1 General
8.2.2 Ferrous and copper alloys
8.2.3 Aluminium alloys
8.3 Forgings

9 Mass

10 Installation requirements

10.1 Space envelope
10.2 Overtravel
10.3 Adjustment
10.4 Dimensions
10.4.1 Retracted length
10.4.2 Extended length
10.5 Interface document
10.6 Installation drawing
10.7 Mounting of the actuator to structure
10.8 Hydraulic interfaces
10.9 Electrical interfaces (if applicable)

11 Instrumented utility actuator

12 Maintainability requirements

12.1 General
12.2 Maintenance concept
12.3 Service life limitations and storage specifications
12.4 Reparability

13 Reliability requirements

13.1 Requirements
13.2 Equipment compliance

14 Quality assurance provisions

14.1 Responsibility for inspection
14.2 First article inspection (FAI)
14.2.1 General
14.2.2 First article samples
14.2.3 First article inspection report
14.2.4 Rejection
14.3 Classification of tests
14.4 Test stand requirements

15 Development tests

16 Acceptance tests

16.1 General
16.2 Examination of the product
16.3 Test programme and inspection methods
16.3.1 General
16.3.2 Mass
16.3.3 Run-in
16.3.4 Proof pressure
16.3.5 Leakage
16.3.5.1 External leakage
16.3.5.2 Internal leakage
16.3.5.3 Dynamic leakage
16.3.5.4 Low pressure leakage
16.3.6 Performance tests
16.3.7 Electro-conductive bonding
16.3.8 Storage and packaging

17 Qualification

17.1 Purpose
17.2 Qualification procedure
17.2.1 Qualification programme plan
17.2.2 Qualification test procedure
17.2.3 Similarity and analysis report
17.2.4 Qualification test report

17.2.5 Samples and programme of qualification tests
17.2.6 Acceptance tests
17.2.7 Dimensional check
17.2.8 Expanded envelope acceptance tests
17.2.9 Performance
17.2.9.1 General
17.2.9.2 Normal extension load
17.2.9.3 Normal retraction load
17.2.9.4 Maximum extension load
17.2.9.5 Maximum retraction load
17.2.9.6 Operation at full flow relief pressure
17.2.9.6.1 Extension
17.2.9.6.2 Retraction
17.2.9.7 Stall load
17.2.9.8 Alternate extension (if applicable)
17.2.9.9 Alternate retraction (if applicable)
17.2.10 Endurance test
17.2.11 Structural tests
17.2.11.1 General
17.2.11.2 Proof pressure
17.2.11.3 Ultimate (burst) pressure
17.2.11.4 Limit load
17.2.11.5 Ultimate load
17.2.11.6 Design operating pressure and limit structural load
17.2.11.7 Proof pressure and ultimate structural load
17.2.11.8 Buckling load
17.2.11.9 Locking loads
17.2.11.10 Impulse fatigue
17.2.11.11 Mechanical fatigue
17.2.11.12 Bench handling loads
17.2.11.13 Wrench loads
17.2.11.14 Vibration
17.2.11.14.1 Test set-up
17.2.11.14.2 Test procedure
17.2.11.14.3 Other vibration tests
17.2.11.15 Operational shock
17.2.12 Environmental tests
17.2.13 Post qualification tests
17.2.13.1 Acceptance tests
17.2.13.2 Disassembly and inspection
17.2.14 Supplementary tests
